#### **Auckland Unitary Plan**

Notice of Requirement for a new designation to widen the existing Puhinui Road between Plunket Avenue and east of the SH20/SH20B Interchange to provide for a Bus Rapid Transit corridor and walking and cycling facilities.

#### **Notice of Requirement**

Auckland Council has received a notice of a requirement for a designation from Auckland Transport as the Requiring Authority, for public work.

The requirement is for the Airport to Botany Bus Rapid Transit to enable the Requiring Authority to:

- Provide a bus rapid transit corridor that connects key destinations from Orrs Road (Auckland Airport boundary), with Manukau City Centre and Botany Town Centre.
- Enable the provision of public transport and active mode corridors in a matter that:
  - is safe for all transport users:
  - o connects Orrs Road (Auckland Airport boundary), with Manukau City Centre and Botany Town Centre;
  - includes efficient, resilient and reliable dedicated public transport and active mode infrastructure:
  - contributes to mode shift by improving travel choice and access to key destinations along the corridors;
  - o connects to existing and planned public transport stations
  - integrates with the existing and planned future environment; and
  - o recognises the future strategic function of the corridor.

The site to which the requirement applies is as follows: Puhinui Road

#### Viewing the notice of requirement

requirement The explanation of the notice of can be found on our web site https://www.aucklandcouncil.govt.nz/nor. If you don't have access to a computer, please visit your local library or service centre and they will help you view the notice of requirement on our website.

If you have any questions about the notice of requirement, please contact: Unitary Plan at <a href="mailto:unitaryplan@aucklandcouncil.govt.nz">unitaryplan@aucklandcouncil.govt.nz</a> or on 09 365 3786

#### Making a submission on the notice of requirement

Any person or organisation may make a submission on the notice of requirement, but a person who is a trade competitor of the requiring authority may do so only if that person is directly affected by an effect of the activity to which the requirement relates that –

- (a) Adversely affects the environment; and
- (b) Does not relate to trade competition or the effects of trade competition.

You may make a submission by sending a written or electronic form to Auckland Council at:

- Auckland Council, Unitary Plan Private Bag 92300, Auckland 1142, Attention: Planning Technician, or
- By using the online form on the Auckland Council website at <a href="https://www.aucklandcouncil.govt.nz/nor">https://www.aucklandcouncil.govt.nz/nor</a>, or
- By email to: unitaryplan@aucklandcouncil.govt.nz ;or
- Lodging your submission in person at Auckland Council, Libraries or offices.

#### Submissions close on 11 April 2023.

You must serve a copy of your submission on Auckland Transport, whose address for service is Private Bag 92250, Auckland 1142 Attention: Patrick Buckley, as soon as reasonably practicable after serving your submission on Auckland Council.

John Duguid Manager – Plans & Places

Auckland Council C/o David Wong Planning Central/South – Plans and Places

Dear David

#### Re: AIRPORT TO BOTANY BUS RAPID TRANSIT NOTICES OF REQUIREMENT

This letter is to advise that Auckland Transport gives notice of requirement for four new designations and Waka Kotahi New Zealand Transport Agency (Waka Kotahi) gives notice of requirement for an alteration to existing Designation 6717 together as part of the proposed Airport to Botany Bus Rapid Transit Project.

The lodgement documents have been prepared together as one package and are in four volumes as follows:

- Volume 1: Form 18 for each of the five notices
- Volume 2: Assessment of Effects on the Environment
- Volume 3: General Arrangement Layout Plans
- Volume 4: Supporting Technical Assessments

These have been emailed to you via file transfer links and one hard copy will be delivered to the Auckland Council reception at 135 Albert Street.

Please contact me in the first instance if there are any queries.

Yours sincerely

Adam Jellie

#### **FORM 18**

### NOTICE OF REQUIREMENT FOR DESIGNATION OF LAND UNDER \$168(2) OF THE RESOURCE MANAGEMENT ACT 1991

TO: Auckland Council

FROM: Auckland Transport

Auckland Transport (an Auckland Council Controlled Organisation) as a Requiring Authority under section 167 of the Resource Management Act 1991 (RMA) gives notice of requirement (NoR) for a designation in the Auckland Unitary Plan for a public work, being the construction, operation and maintenance of an upgrade to Puhinui Road between Plunket Avenue and the SH20/20B Interchange for a Bus Rapid Transit corridor, walking and cycling facilities and associated infrastructure.

#### **SUMMARY**

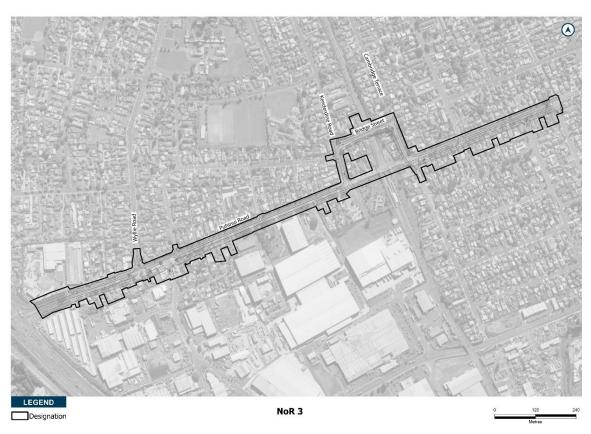

The overall Airport to Botany Bus Rapid Transit (**BRT**) Project will provide an 18 km, dedicated, high capacity, reliable, and frequent BRT corridor and walking and cycling facilities.

Auckland Transport and Waka Kotahi NZ Transport Agency (**Waka Kotahi**) are seeking to authorise a 14.9 km portion of the overall Project which extends from the south of Botany Town Centre to Orrs Road (**Project**) under the Te Tupu Ngātahi Supporting Growth Programme.

This form is for NoR 3 which is for the construction, operation and maintenance of an upgrade to Puhinui Road between Plunket Avenue and the SH20/20B Interchange to provide for a BRT corridor, walking and cycling facilities and associated infrastructure.

The extent of NoR 3 and the proposed designation boundary is outlined below.

The purpose of the designation is for the construction, operation, and maintenance of a BRT corridor and walking and cycling facilities. The activities to be enabled by the designation include environmental mitigation, temporary construction areas, and associated infrastructure required for the implementation of the designation.

The project objectives for NoR 3 are set out below:

- 1. Provide a bus rapid transit corridor that connects key destinations from Orrs Road (Auckland Airport boundary), with Manukau City Centre and Botany Town Centre.
- 2. Enable the provision of public transport and active mode corridors in a matter that:
  - a) is safe for all transport users;
  - b) connects Orrs Road (Auckland Airport boundary), with Manukau City Centre and Botany Town Centre;
  - c) includes efficient, resilient and reliable dedicated public transport and active mode infrastructure;
  - d) contributes to mode shift by improving travel choice and access to key destinations along the corridors;
  - e) connects to existing and planned public transport stations
  - f) integrates with the existing and planned future environment; and
  - g) recognises the future strategic function of the corridor.

As an approved Requiring Authority under section 176 of the RMA via section 47(1) of the Local Government (Auckland Council) Act 2009, Auckland Transport may designate to construct, operate and maintain a road and undertake ancillary activities.

#### THE SITE TO WHICH THE REQUIREMENT APPLIES IS AS FOLLOWS:

The area of the proposed NoR 3 designation is shown on the Designation Plans included in **Attachment A** of this Notice. The land directly affected by NoR 3 is identified in the Schedule of Directly Affected Properties included in **Attachment B** of this Notice.

#### THE NATURE OF THE PROPOSED WORKS IS:

The proposed work is for the construction, operation and maintenance of an upgrade to Puhinui Road between Rongomai Park and Plunket Avenue for a BRT corridor, walking and cycling facilities and associated infrastructure.

The nature of the proposed work is described in *Section 3: Project description* and *Section 6.2:*Construction methodology of the accompanying Assessment of Effects on the Environment (**AEE**).

In summary, the proposed work includes:

- a) An upgrade of Puhinui Road to accommodate centre-running BRT lanes, general traffic lanes and walking and cycling facilities;
- b) An upgrade of Cambridge Terrace, Bridge Street and Kenderdine Road to provide for walking and cycling facilities;
- c) Associated works including but not limited to intersections, bridges, embankments, retaining walls, culverts, stormwater management systems;
- d) A bridge crossing the North Island Main Trunk line to connect the BRT to Puhinui Station;
- e) Changes to local roads, where the proposed work intersects with local roads; and
- f) Construction activities, including vegetation removal, construction areas and the re-grading of driveways.

#### THE NATURE OF THE PROPOSED CONDITIONS THAT WOULD APPLY ARE:

The proposed conditions that will apply to the work are included in **Attachment C** of this Notice.

## THE EFFECTS THAT THE PROPOSED WORK WILL HAVE ON THE ENVIRONMENT, AND THE WAYS IN WHICH ANY ADVERSE EFFECTS WILL BE MITIGATED ARE:

The AEE contains a description of the existing and likely future environment (Section 6) and (Section 7), an assessment of the effects on the environment from the Project (Section 9), and the proposed measures to avoid, remedy or mitigate the adverse effects of the Project (Section 10).

#### **Positive Effects**

The Project will generate a variety of positive effects. The nature and degree of these positive effects are elaborated on in Section 9.1 of the AEE. However, in summary, the Project will:

- Provide better access to jobs and education for southern and eastern Auckland;
- Enable a significant increase in public transport usage in the area, increasing the public transport mode share and decreasing travel by light vehicles;
- Improve integration with existing and future public transport networks;

- Improve walking and cycling connectivity along the full BRT corridor, including to employment, social and recreational facilities;
- Enable opportunities for higher density urban development, particularly around proposed BRT stations;
- Increase canopy cover in southern Auckland and improve the streetscape through the provision of street trees and vegetation within and adjacent to the Project corridor;
- Provide for the inclusion of green stormwater infrastructure, such as vegetated swales, planted stormwater wetlands and raingardens; and
- Provides opportunities to enhance the character and identity of the neighbourhoods through future design and partnership with Manawhenua.

#### **Adverse Effects**

There will be a range of potential adverse effects during the construction and operational phases of the Project, which are assessed in the following sections of the AEE:

- Transport (Section 9.3 of the AEE);
- Arboriculture (Section 9.4 of the AEE);
- Social (Section 9.5 of the AEE);
- Property (Section 9.6 of the AEE);
- Urban Design (Section 9.7 of the AEE);
- Landscape (Section 9.8 of the AEE);
- Flooding (Section 9.9 of the AEE);
- Noise and Vibration (Section 9.10 of the AEE);
- Terrestrial ecology (Section 9.11 of the AEE);
- Archaeological and built heritage (Section 9.12 of the AEE); and
- Network Utilities (9.13 of the AEE).

The AEE draws on information provided in the Technical Assessment Reports (contained in Volume 4 of the AEE).

### ALTERNATIVE SITES, ROUTES, AND METHODS HAVE BEEN CONSIDERED TO THE FOLLOWING EXTENT:

A wide range of alternatives have been investigated for addressing the gap in the rapid transit network in the southern and eastern suburbs of Auckland.

The assessment of alternatives process has generally followed a long list – short list – recommended option process, staring at the broadest feasible area and progressively narrowing down the area to a single preferred route.

Section 1.2.4: Background and context of the AEE summarises the background to the development of the Airport to Botany Bus Rapid Transit Project, which includes NoR 3.

The process by which Auckland Transport considered alternative sites, routes and methods for NoR 3 is detailed in *Appendix A of the AEE: Assessment of Alternatives Report*. The development of NoR 3 was based on a comprehensive and robust optioneering process taking into account Manawhenua, stakeholder and landowner feedback along with specialist assessment inputs.

## THE PROPOSED WORK AND DESIGNATION ARE REASONABLY NECESSARY FOR ACHIEVING THE OBJECTIVES OF THE REQUIRING AUTHORITY BECAUSE:

The work and designation are reasonably necessary to meet the objectives of Auckland Transport. Refer to Section 4.2: Project objectives and Appendix B of the AEE: Assessment against relevant statutory and strategic planning documents

Auckland Transport's purpose under section 39 of the Local Government (Auckland Council) Act 2009 (**LGA**) is "to contribute to an effective, efficient, and safe Auckland land transport system in the public interest". NoR 3 will assist Auckland Transport in meeting this objective.

The Auckland Transport project objectives for NoR 3 are set out below:

- 1. Provide a bus rapid transit corridor that connects key destinations from Orrs Road (Auckland Airport boundary), with Manukau City Centre and Botany Town Centre.
- 2. Enable the provision of public transport and active mode corridors in a matter that:
  - a) is safe for all transport users;
  - b) connects Orrs Road (Auckland Airport boundary), with Manukau City Centre and Botany Town Centre;
  - c) includes efficient, resilient and reliable dedicated public transport and active mode infrastructure:
  - d) contributes to mode shift by improving travel choice and access to key destinations along the corridors;
  - e) connects to existing and planned public transport stations;
  - f) integrates with the existing and planned future environment; and
  - g) recognises the future strategic function of the corridor.

NoR 3 is reasonably necessary for achieving these objectives because it will:

- Improve public transport access to the south-western, southern and eastern suburbs of Auckland (Section 9.1 of the AEE);
- Provide safe travel choices, supporting Auckland Transport and Waka Kotahi Vision Zero philosophy (Section 9.1 of the AEE);
- Intensification of the corridor by public agencies and private developers (Section 7.5 of the AEE); and
- Improve environmental and cultural outcomes (i.e., increased tree canopy cover and green infrastructure).

The proposed designation is reasonably necessary as it identifies and protects land required for NoR 3 and will enable Auckland Transport to carry out the proposed work.

### THE FOLLOWING RESOURCE CONSENTS ARE NEEDED FOR THE PROPOSED ACTIVITY AND HAVE NOT BEEN APPLIED FOR:

NoR 3 will require resource consents for a number of activities to enable the proposed work. The resource consents are not sought at this time and will be sought when detailed design is complete and closer to the construction. The future resource consents likely to be required for NoR 3 are summarised below.

- Resource consents for the disturbance of contaminated, or potentially contaminated land under the Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011;
- Resource consents for specified infrastructure works within rivers, streams and natural wetlands under the Resource Management (National Environmental Standards for Freshwater) Regulations 2020;
- At this stage, no relocation of Transpower's pylons or transmission lines is anticipated and therefore no resource consents will be required under the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009;
- Resource consents for the following activities under the Auckland Unitary Plan: Operative in part:
  - Bulk earthworks and associated discharge of sediment;
  - Removal of riparian vegetation;
  - Stormwater discharge to land or water;
  - Discharge of contaminants to land;
  - Activities (including structures and associated works) in, on, under or over the bed of rivers, streams, wetlands;
  - Water take, use and diversion;
  - Temporary construction works and minor vegetation removal in significant ecological areas; and
  - Bridge, culvert, and related stream works will be sought as part of the future consenting stage.

### THE FOLLOWING CONSULTATION HAS BEEN UNDERTAKEN WITH PARTIES THAT ARE LIKELY TO BE AFFECTED:

Consultation and engagement is ongoing with various parties who are directly affected by or have an interest in the Project including Manawhenua, property owners and occupiers, Auckland Council, Waka Kotahi, Auckland Airport, network utility operators, emergency services, business and community representative groups and the wider community. Engagement activities included online meetings, phone calls, face to face meetings, workshops, presentations, hui, newsletters, and online information.

The consultation undertaken is detailed in Section 11: Engagement of the AEE.

#### **EXTENDED LAPSE PERIOD PROPOSED:**

Under section 184(1) of the RMA a designation lapses on the expiry of 5 years after the date on which it is included in the district plan unless it is given effect to, substantial progress or effort has been made to give effect to, or a different period is specified when incorporated into the plan. There is a need to designate the corridor from inappropriate development until funding is allocated. Therefore, pursuant to section 184(1)(c) of the RMA, a lapse period of 15 years is required for the implementation of the proposed designation.

## INFORMATION REQUIRED TO BE INCLUDED IN THIS NOTICE BY THE AUCKLAND UNITARY PLAN OR ANY REGULATION MADE UNDER THE RESOURCE MANAGEMENT ACT 1991:

Auckland Transport attaches the following information required to be included in this notice by the Auckland Unitary Plan, or any regulations made under the RMA.

- Volume 2: Assessment of Effects on the Environment;
- Volume 3: General Arrangement Plans; and
- Volume 4: Supporting Technical Assessment Reports.

Signed on behalf of Auckland Transport

Jane Small

| and 4a       |     | <ul> <li>(a) At least twelve (12) months prior to the start of detailed design for a Stage of Work, the Requiring Authority shall invite Mana Whenua to establish a Mana Whenua Partnership Forum (MWPF). The objective of the MWPF is to provide a forum for Mana Whenua to participate as partners in all phases of the Project. To achieve the objective, the MWPF shall address (as a minimum) the following matters: <ol> <li>(i) how Mana Whenua will provide input into the design of the Project. For example:</li> <li>A. how Mana Whenua values and narrative are incorporated through the form of the Project and associated structures;</li> <li>B. how the historic and cultural significance of the Puhinui Historic Gateway will be recognised; and</li> <li>C. how pou, art, sculptures, mahi toi or other any other features located on land within or adjoining the Project will be provided in a manner that represents the Māori history of the area and promotes a distinctiveness or sense of place.</li> <li>(ii) how Mana Whenua will be engaged in the preparation of management plans and future consenting processes;</li> <li>(iii) how matauranga Māori and tikanga Māori will be recognised in all phases of the Project;</li> <li>(iv) where opportunities for Mana Whenua to participate in engagement with local communities, business associations, social institutions and community groups will be provided;</li> <li>(v) where opportunities for Mana Whenua to support the physical, mental, social and economic wellbeing for iwi and the local community will be provided through the Project. This could include:  A. planting supplied through Mana Whenua and community based nurseries;</li> <li>B. local schools being involved in planting; and</li> <li>C. scholarships, cadetships and job creation.</li> <li>(vi) the Requiring Authority shall provide reasonable resourcing, technical and administrative support for Mana Whenua including organising meetings at a local venue and the taking and dissemination of meeting minutes;</li> <li>(vii) the frequency of meeti</li></ol></li></ul> |

|              |     | (c) The MWPF shall continue to meet for at least six months following the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|                        |       | Work.  (b) Mana Whenua shall be invited to participate in the development of the ULDMP at least six (6) months prior to the start of detailed design for a Stage of Work to provide input on cultural landscape and design matters. This shall include (but not be limited to) how desired outcomes for the management of potential effects on cultural sites, landscapes and values identified and discussed in accordance with the Historic Heritage Management Plan (Condition 23) and the Ecological Management Plan (Condition 25) may be reflected in the ULDMP                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                        | (     | (c) The objective of the ULDMP is to:         (i) enable integration of the Project's permanent works into the surrounding landscape and urban context;         (ii) ensure that the Project manages potential adverse landscape and visual effects as far as practicable and contributes to a quality urban                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|                        | (     | updated version.  (e) To achieve the objective, the ULDMP shall provide details of how the project:  (i) is designed to integrate with the adjacent urban (or proposed urban) and landscape context, including the surrounding existing or proposed topography, urban environment (i.e. centres and density of built form), natural environment, landscape character and open space zones;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|                        |       | <ul> <li>(ii) provides appropriate walking and cycling connectivity to, and interfaces with, existing or proposed adjacent land uses, public transport infrastructure and walking and cycling connections;</li> <li>(iii) promotes inclusive access (where appropriate); and</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|                        |       | (iv) promotes a sense of personal safety by aligning with best practice guidelines, such as:  A. Crime Prevention Through Environmental Design (CPTED) principles;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                        |       | <ul> <li>B. Safety in Design (SID) requirements; and</li> <li>C. Maintenance in Design (MID) requirements and antivandalism/anti-graffiti measures.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

- (v) provides opportunities to incorporate Mana Whenua values and cultural narrative through the design. This shall include but not be limited to:
  - A. how to protect and enhance connections to the Māori cultural landscape;
  - how and where accurate historical signage can be provided along the corridor;
  - C. how historical portage routes will be recognised;
  - how opportunities for cultural expression through, for example mahi toi, art, sculptures or other public amenity features will be provided;
  - E. how opportunities to utilise flora and fauna with a specific connection to the area are realised where possible by:
    - a. preserving them in the design and maintenance of the Project: and
    - b. restoring them in a manner that recognises their historical and cultural significance. For example by clustering planting to represent a lost ngahere.
  - F. how the historic and cultural significance of the Puhinui Historic Gateway is recognised; and
  - G. how public access to coastal areas, waterways and open space is enhanced, where appropriate.
- (vi) provides for an integrated stormwater management approach which prioritises in the following order:
  - A. opportunities for ki uta ki tai (a catchment scale approach);
  - B. opportunities for net catchment benefit;
  - C. green infrastructure and nature-based solutions; and
  - D. opportunities for low maintenance design.
- (f) At the discretion of Mana Whenua, the matters listed in (e)(v) (vi) shall either be incorporated into the ULDMP or prepared as a separate plan.
- (g) The ULDMP shall include:
  - a concept plan(s) which depicts the overall landscape and urban design concept, and explains the rationale for the landscape and urban design proposals;
  - (ii) developed design concepts, including principles for walking and cycling facilities and public transport; and
  - (iii) landscape and urban design details that cover the following:
    - A. road design elements such as intersection form, carriageway gradient and associated earthworks contouring including cut and fill batters and the interface with adjacent land uses, benching, spoil disposal sites, median width and treatment, roadside width and treatment:
    - B. roadside elements such as lighting, fencing, wayfinding and signage;
    - C. architectural and landscape treatment of all major structures, including bridges and retaining walls;
    - D. architectural and landscape treatment of noise barriers;
    - E. landscape treatment of permanent stormwater control wetlands and swales;
    - F. integration of passenger transport;
    - G. pedestrian and cycle facilities including paths, road crossings and dedicated pedestrian/ cycle bridges or underpasses;
    - H. historic heritage places with reference to the HHMP (Condition 23);
    - re-instatement of construction and site compound areas, driveways, accessways and fences.
- (h) The ULDMP shall also include the following planting details and maintenance requirements:
  - (i) planting design details including:
    - A. identification of existing trees and vegetation that will be retained with reference to the Tree Management Plan (Condition 26).

- Where practicable, mature trees and native vegetation should be retained:
- B. street trees, shrubs and ground cover suitable for berms;
- C. treatment of fill slopes to integrate with adjacent land use, streams, riparian margins and open space zones;
- D. planting of stormwater wetlands;
- E. identification of vegetation to be retained and any planting requirements under the Ecological Management Plan (Condition 25) and Tree Management Plan (Condition 26);
- F. integration of any planting requirements required by conditions of any resource consents for the project; and
- G. re-instatement planting of construction and site compound areas as appropriate.
- a planting programme including the staging of planting in relation to the construction programme which shall, as far as practicable, include provision for planting within each planting season following completion of works in each Stage of Work; and
- (iii) detailed specifications relating to the following:
  - A. weed control and clearance;
  - B. pest animal management (to support plant establishment);
  - C. ground preparation (top soiling and decompaction);
  - D. mulching; and
  - E. plant sourcing and planting, including hydroseeding and grassing, and use of eco-sourced species.

#### Advice Note:

This designation is for the purpose of construction, operation and maintenance of an arterial transport corridor and it is not for the specific purpose of "road widening". Therefore, it is not intended that the front yard definition in the Auckland Unitary Plan which applies a set back from a designation for road widening purposes applies to this designation. A set back is not required to manage effects between the designation boundary and any proposed adjacent sites or lots.

#### **Specific Outline Plan Requirements**

14.

# NoRs 1, 2, 3 and 4a

#### Flood Hazard

- (a) The Project shall be designed to achieve the following flood risk outcomes:
  - no increase in flood levels for existing authorised habitable floors that are already subject to flooding;
  - (ii) no more than a 10% reduction in freeboard for existing authorised habitable floors;
  - (iii) no increase of more than 50mm in flood level on land zoned for urban or future urban development where there is no existing dwelling;
  - (iv) no new flood prone areas; and
  - (v) no more than a 10% average increase of flood hazard (defined as flow depth times velocity) for main access to authorised habitable dwellings existing at time the Outline Plan is submitted.
- (b) Compliance with this condition shall be demonstrated in the Outline Plan, which shall include flood modelling of the pre-Project and post-Project 100 year ARI flood levels (for Maximum Probable Development land use and including climate change).
- (c) Where the above outcomes can be achieved through alternative measures outside of the designation such as flood stop banks, flood walls, raising existing authorised habitable floor level and new overland flow paths or varied through agreement with the relevant landowner, the Outline Plan shall include confirmation that any necessary landowner and statutory approvals have been obtained for that work or alternative outcome.

#### **Construction Conditions**

| NoRs 1, 2, 3<br>and 4a | 15. | Construction Environmental Management Plan (CEMP)  (a) A CEMP shall be prepared prior to the Start of Construction for a Stage of Work.  (b) The objective of the CEMP is to set out the management procedures and construction methods to be undertaken to avoid, remedy or mitigate any adverse effects associated with Construction Works as far as practicable. To achieve the objective, the CEMP shall include:  (i) the roles and responsibilities of staff and contractors;  (ii) details of the site or project manager and the Project Liaison Person, including their contact details (phone and email address);  (iii) the Construction Works programmes and the staging approach, and the proposed hours of work;  (iv) details of the proposed construction yards including temporary screening when adjacent to residential areas, locations of refuelling activities and construction lighting;  (v) methods for controlling dust and the removal of debris and demolition of construction materials from public roads or places;  (vi) methods for providing for the health and safety of the general public;  (vii) measures to mitigate flood hazard effects such as siting stockpiles out of floodplains, minimising obstruction to flood flows, actions to respond to warnings of heavy rain;  (viii)procedures for incident management;  (ix) procedures for the refuelling and maintenance of plant and equipment to avoid discharges of fuels or lubricants to watercourses;  (x) measures to address the storage of fuels, lubricants, hazardous and/or dangerous materials, along with contingency procedures to address emergency spill response(s) and clean up;  (xi) procedures for responding to complaints about Construction Works; and (xii) methods for amending and updating the CEMP as required. |
| NoRs 1, 2, 3<br>and 4a | 16. | Complaints Register  (a) At all times during Construction Works, a record of any complaints received about the Construction Works shall be maintained. The record shall include:  (i) the date, time and nature of the complaint;  (ii) the name, phone number and address of the complainant (unless the complainant wishes to remain anonymous);  (iii) measures taken to respond to the complaint (including a record of the response provided to the complainant) or confirmation of no action if deemed appropriate;  (iv) the outcome of the investigation into the complaint; and  (v) any other activities in the area, unrelated to the Project that may have contributed to the complaint, such as non-project construction, fires, traffic accidents or unusually dusty conditions generally.  (b) A copy of the Complaints Register required by this condition shall be made available to the Manager upon request as soon as practicable after the request is made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

identification of activities, sites and areas where cultural monitoring is required during particular Construction Works; identification of personnel to undertake cultural monitoring, including any geographic definition of their responsibilities; details of the preferred Accidental Discovery Protocol; and details of personnel to assist with management of any cultural effects identified during cultural monitoring, including implementation of the Accidental Discovery Protocol. (e) If Enabling Works involving soil disturbance are undertaken prior to the start of Construction Works, an Enabling Works Cultural Monitoring Plan shall be prepared by a Suitably Qualified and Experienced Person identified in collaboration with Mana Whenua. This plan may be prepared as a standalone Enabling Works Cultural Monitoring Plan or be included in the main Construction Works Cultural Monitoring Plan. Advice Note: Where appropriate, the Cultural Monitoring Plan shall align with the requirements of other conditions of the designation and resource consents for the Project which require monitoring during Construction Works. NoRs 1, 2, 3 18. **Construction Traffic Management Plan (CTMP)** and 4a (a) A CTMP shall be prepared prior to the Start of Construction for a Stage of Work. The objective of the CTMP is to avoid, remedy or mitigate, as far as practicable, adverse construction traffic effects. To achieve this objective, the CTMP shall methods to manage the effects of temporary traffic management activities on traffic; measures to ensure the safety of all transport users; the estimated numbers, frequencies, routes and timing of traffic movements, including any specific non-working or non-movement hours to manage vehicular and pedestrian traffic near schools or to manage traffic congestion; (iv) site access routes and access points for heavy vehicles, the size and location of parking areas for plant, construction vehicles and the vehicles of workers and visitors; identification of detour routes and other methods to ensure the safe management and maintenance of traffic flows, including pedestrians and cyclists, on existing roads; methods to maintain vehicle access to property and/or private roads where practicable, or to provide alternative access arrangements when it will not (vii) the management approach to loads on heavy vehicles, including covering loads of fine material, the use of wheel-wash facilities at site exit points and the timely removal of any material deposited or spilled on public roads; and (viii) methods that will be undertaken to communicate traffic management measures to affected road users (e.g. residents / public / stakeholders / emergency services). NoR 1, 2, 3 19. **Construction Noise Standards** and 4a (a) Construction noise shall be measured and assessed in accordance with NZS6803:1999 Acoustics - Construction Noise and shall comply with the noise standards set out in the following table as far as practicable: Table 19.1: Construction noise standards Day of week Time period LAeq(15min) LAFmax Occupied activity sensitive to noise

|                       |     |                     | Weekday                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0630h - | NoR 1, 2, 3 | 22. | Schedule to a CNVMP                                                                                                                                                              |  |  |
| and 4a      |     | (a) Unless otherwise provided for in a CNVMP, a Schedule to the CNVMP                                                                                                            |  |  |
|             |     | (Schedule) shall be prepared prior to the start of the construction to which it                                                                                                  |  |  |
|             |     | relates by a Suitably Qualified and Experienced Person, in consultation with the                                                                                                 |  |  |
|             |     | owners and occupiers of sites subject to the Schedule, when:                                                                                                                     |  |  |
|             |     | <ul> <li>(i) construction noise is either predicted or measured to exceed the noise<br/>standards in Condition 19, except where the exceedance of the L<sub>Aeq</sub></li> </ul> |  |  |
|             |     | criteria is no greater than 5 decibels and does not exceed:                                                                                                                      |  |  |
|             |     | A. 0630 – 2000: 2 periods of up to 2 consecutive weeks in any 2                                                                                                                  |  |  |
|             |     | months; or                                                                                                                                                                       |  |  |

- B. 2000 0630: 1 period of up to 2 consecutive nights in any 10 days.
- (ii) construction vibration is either predicted or measured to exceed the Category B standard at the receivers in Condition 20.
- (b) The objective of the Schedule is to set out the Best Practicable Option measures to manage noise and/or vibration effects of the construction activity beyond those measures set out in the CNVMP. The Schedule shall include details such as:
  - (i) construction activity location, start and finish dates;
  - (ii) the nearest neighbours to the construction activity;
  - (iii) the predicted noise and/or vibration level for all receivers where the levels are predicted or measured to exceed the applicable standards and predicted duration of the exceedance;
  - (iv) the proposed mitigation options that have been selected, and the options that have been discounted as being impracticable and the reasons why;
  - (v) the consultation undertaken with owners and occupiers of sites subject to the Schedule, and how consultation has and has not been taken into account; and
  - (vi) location, times and types of monitoring.
- (c) The Schedule shall be submitted to the Manager for certification at least 5 working days (except in unforeseen circumstances) in advance of Construction Works that are covered by the scope of the Schedule and shall form part of the CNVMP.
- (d) Where material changes are made to a Schedule required by this condition, the Requiring Authority shall consult the owners and/or occupiers of sites subject to the Schedule prior to submitting the amended Schedule to the Manager for certification in accordance with (c) above. The amended Schedule shall document the consultation undertaken with those owners and occupiers, and how consultation outcomes have and have not been taken into account.

23.

#### **Historic Heritage Management Plan (HHMP)**

- (a) A HHMP shall be prepared in consultation with Council, HNZPT and Mana Whenua prior to the Start of Construction for a Stage of Work.
- (b) The objective of the HHMP is to protect historic heritage and to remedy and mitigate any residual effects as far as practicable. To achieve the objective, the HHMP shall identify:
  - any adverse direct and indirect effects on historic heritage sites and measures to appropriately avoid, remedy or mitigate any such effects, including a tabulated summary of these effects and measures;
  - (ii) methods for the identification and assessment of potential historic heritage places within the Designation to inform detailed design;
  - (iii) known historic heritage places and potential archaeological sites within the Designation, including identifying any archaeological sites for which an Archaeological Authority under the HNZPTA will be sought or has been granted;
  - (iv) any unrecorded archaeological sites or post-1900 heritage sites within the Designation, which shall also be documented and recorded;
  - roles, responsibilities and contact details of Project personnel, Council and HNZPT representatives, Mana Whenua representatives, and relevant agencies involved with heritage and archaeological matters including surveys, monitoring of Construction Works, compliance with AUP accidental discovery rule, and monitoring of conditions;
  - (vi) specific areas to be investigated, monitored and recorded to the extent these are directly affected by the Project;
  - (vii) the proposed methodology for investigating and recording post-1900 historic heritage sites (including buildings) that need to be destroyed, demolished or relocated, including details of their condition, measures to mitigate any adverse effects and timeframe for implementing the proposed methodology, in accordance with the HNZPT Archaeological Guidelines Series No.1: Investigation and Recording of Buildings and Standing Structures (November 2018), or any subsequent version;

| and 4a       |     | <ul> <li>(a) At the start of detailed design for a Stage of Work, an updated ecological survey shall be undertaken by a Suitably Qualified and Experienced Person. The purpose of the survey is to inform the detailed design of ecological management by: <ol> <li>(i) confirming whether the species of value within the Identified Biodiversity Areas recorded in Schedule 3 are still present; and</li> <li>(ii) confirming whether the project will or may have a moderate or greater level of ecological effect on ecological species of value, prior to implementation of impact management measures, as determined in accordance with the EIANZ guidelines (or any subsequent updated version).</li> </ol> </li> <li>(b) Mana Whenua shall be invited as partners to observe how the ecological survey in (a) will be undertaken.</li> <li>(c) If the ecological survey in (a) above confirms the presence of ecological species of value in accordance with Condition 24(a)(i) and that effects are likely in accordance with Condition 24(a)(ii), then an Ecological Management Plan (or Plans) shall be prepared in accordance with Condition 25 for these areas (Confirmed Biodiversity Areas).</li> </ul>                                                                                                                                                                                                                                                           |
| NoRs 1, 2, 3 | 25. | Ecological Management Plan (EMP)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| and 4a       |     | <ul> <li>(a) An EMP shall be prepared for any Confirmed Biodiversity Areas (confirmed through Condition 24) prior to the Start of Construction for a Stage of Work. The objective of the EMP is to minimise impacts of the Project on the ecological values of Confirmed Biodiversity Areas as far as practicable. The EMP shall set out the methods that will be used to achieve the objective which may include:         <ol> <li>if an EMP is required in accordance with Condition 24(b) for the presence of long-tailed bats:</li> </ol> </li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

- A. measures to minimise disturbance from construction activities within the vicinity of any active roosts that are discovered until such roosts are confirmed to be vacant of bats;
- B. how the timing of any construction work in the vicinity of any maternity long tail bat roosts will be limited to outside the bat maternity period (between December and March) where reasonably practicable;
- C. details of areas where vegetation is to be retained where practicable for the purposes of the connectivity of long tailed bats;
- D. details of how bat connectivity will be provided and maintained (e.g. through the presence of suitable indigenous, or exotic trees or artificial alternatives) will be provided and maintained; and
- where mitigation isn't practicable, details of any offsetting proposed.
- (ii) If an EMP is required in accordance with Condition 24(b) for the presence of Threatened or At-Risk birds (excluding Wetland Bird):
  - A. how the timing of any Construction Works shall be undertaken outside of the bird breeding season (September to February) where practicable:
  - B. where Pipit are identified as being present, how the timing of any Construction Works shall be undertaken outside of the Pipit bird breeding season (August to February) where practicable;
  - C. where works are required within the Confirmed Biodiversity Area during the bird breeding season (including Pipits), methods to minimise adverse effects on Threatened or At-Risk birds; and
  - D. details of grass maintenance if Pipit are present.
- (iii) If an EMP is required in accordance with Condition 24(b) for the presence of Threatened or At-Risk wetland birds:
  - A. how the timing of any Construction Works shall be undertaken outside of the bird breeding season (September to February) where practicable;
  - B. where works are required within the Confirmed Biodiversity Area during the bird breeding season, methods to minimise adverse effects on Threatened or At-Risk wetland birds
  - C. undertaking a nesting bird survey of Threatened or At-Risk wetland birds prior to any Construction Works taking place within a 50m radius of any identified Wetlands (including establishment of construction areas adjacent to Wetlands). Surveys should be repeated at the beginning of each wetland bird breeding season and following periods of construction inactivity;
  - D. what protection and buffer measures will be provided where nesting Threatened or At-Risk wetland birds are identified within 50m of any construction area (including laydown areas). Measures could include:
    - a 20m buffer area around the nest location and retaining vegetation. The buffer areas should be demarcated where necessary to protect birds from encroachment. This might include the use of marker poles, tape and signage;
    - monitoring of the nesting Threatened or At-Risk wetland birds by a Suitably Qualified and Experienced Person.
       Construction works within the 20m nesting buffer areas should not occur until the Threatened or At-Risk wetland birds have fledged from the nest location (approximately

|              |     | 30 days from egg laying to fledging) as confirmed by a Suitably Qualified and Experienced Person; and                                                                                                                                     |
|--------------|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              |     | <ul> <li>minimising the disturbance from the works if construction<br/>works are required within 50m of a nest, as advised by a<br/>Suitably Qualified and Experienced Person.</li> </ul>                                                 |
|              |     | <ul> <li>E. adopting a 10m setback where practicable, between the edge of<br/>wetlands and construction areas (along the edge of the<br/>stockpile/laydown area); and</li> </ul>                                                          |
|              |     | F. minimising light spill from construction areas into wetlands.                                                                                                                                                                          |
|              |     | (b) The EMP shall be consistent with any ecological management measures to be undertaken in compliance with conditions of any regional resource consents granted for the Project.                                                         |
|              |     | (c) Where appropriate, and in partnership with Mana Whenua, flora and fauna values identified in the ULDMP are reflected and included within this EMP.                                                                                    |
|              |     | Advice Note:                                                                                                                                                                                                                              |
|              |     | Depending on the potential effects of the Project, the regional consents for the Project may include the following monitoring and management plans:  (i) Stream and/or wetland restoration plans;  (ii) Vegetation restoration plans; and |
|              |     | (iii) Fauna management plans (e.g. avifauna, herpetofauna, bats).                                                                                                                                                                         |
| NoRs 1, 2, 3 | 26. | Tree Management Plan                                                                                                                                                                                                                      |
|              |     | (a) Prior to the Start of Construction for a Stage of Work, a Tree Management Plan shall be prepared.                                                                                                                                     |
|              |     | <ul> <li>(b) The objective of the Tree Management Plan is to avoid, remedy or mitigate effects of construction activities on trees identified in Schedule 4.</li> <li>(c) The Tree Management Plan shall:</li> </ul>                      |
|              |     | (i) confirm that the trees listed in Schedule 4 still exist; and                                                                                                                                                                          |
|              |     | <ul><li>(ii) demonstrate how the design and location of project works has<br/>avoided, remedied or mitigated any effects on any tree listed in<br/>Schedule 4. This may include:</li></ul>                                                |

|              |     | <ul> <li>C. methods for work within the rootzone of trees that are to be<br/>retained in line with accepted arboricultural standards.</li> </ul>                                                                                          |
|              |     | <ul> <li>(iii) demonstrate how the tree management measures (outlined in A – C above) are consistent with conditions of any resource consents granted for the project in relation to managing construction effects on trees.</li> </ul>   |
| NoRs 1, 2, 3 | 27. | Network Utility Management Plan (NUMP)                                                                                                                                                                                                    |
| and 4a       |     | (a) A NUMP shall be prepared prior to the Start of Construction for a Stage of Work.                                                                                                                                                      |
|              |     | <ul> <li>(b) The objective of the NUMP is to set out a framework for protecting, relocating and working in proximity to existing network utilities. The NUMP shall include methods to:</li> </ul>                                         |
|              |     | <ul> <li>(i) provide access for maintenance at all reasonable times, or emergency works at all times during construction activities;</li> <li>(ii) manage the effects of dust and any other material potentially resulting</li> </ul>     |
|              |     | from construction activities and able to cause material damage, beyond                                                                                                                                                                    |

- normal wear and tear to overhead transmission lines in the Project area; and
- (iii) demonstrate compliance with relevant standards and Codes of Practice including, where relevant, the NZECP 34:2001 New Zealand Electrical Code of Practice for Electrical Safe Distances 2001; AS/NZS 4853:2012 Electrical Hazards on Metallic Pipelines; and AS/NZS 2885 Pipelines Gas and Liquid Petroleum.
- (c) The NUMP shall be prepared in consultation with the relevant Network Utility Operator(s) (including Auckland International Airport Limited) who have existing assets that are directly affected by the Project.
- (d) The development of the NUMP shall consider opportunities to coordinate future work programmes with other Network Utility Operator(s) where practicable.
- (e) The NUMP shall describe how any comments from the Network Utility Operator (including Auckland International Airport Limited) in relation to its assets have been addressed.
- (f) Any comments received from the Network Utility Operator (including Auckland International Airport Limited) shall be considered when finalising the NUMP.
- (g) Any amendments to the NUMP related to the assets of a Network Utility Operator (including Auckland International Airport Limited) shall be prepared in consultation with that asset owner.

#### **Operational Conditions**

# NoRs 1, 2, 3 28.

and 4a

#### **Low Noise Road Surface**

- (a) Asphaltic concrete surfacing (or equivalent low noise road surface) shall be implemented within 12 months of Completion of Construction of the project.
- (b) Any future resurfacing works of the Project shall be undertaken in accordance with the Auckland Transport Reseal Guidelines, Asset Management and Systems 2013 or any updated version and asphaltic concrete surfacing (or equivalent low noise road surface) shall be implemented where:
  - (i) the volume of traffic exceeds 10,000 vehicles per day; or
  - (ii) the road is subject to high wear and tear (such as cul de sac heads, roundabouts and main road intersections); or
  - (iii) it is in an industrial or commercial area where there is a high concentration of truck traffic; or
  - (iv) it is subject to high usage by pedestrians, such as town centres, hospitals, shopping centres and schools.
- (c) Prior to commencing any future resurfacing works, the Requiring Authority shall advise the Manager if any of the triggers in Condition 28(b)(i) – (iv) are not met by the road or a section of it and therefore where the application of asphaltic concrete surfacing (or equivalent low noise road surface) is no longer required on the road or a section of it. Such advice shall also indicate when any resealing is to occur.

# NoRs 1, 2, 3 29. and 4a

#### **Traffic Noise**

For the purposes of Conditions 30 to 41:

- (a) Building-Modification Mitigation has the same meaning as in NZS 6806;
- (b) Design year has the same meaning as in NZS 6806;
- (c) Detailed Mitigation Options means the fully detailed design of the Selected Mitigation Options, with all practical issues addressed;
- (d) Habitable Space has the same meaning as in NZS 6806;
- (e) Identified Noise Criteria Category means the Noise Criteria Category for a PPF identified in Schedule 2: Identified PPFs Noise Criteria Categories;
- (f) Mitigation has the same meaning as in NZS 6806:2010 Acoustics Road-traffic noise – New and altered roads;
- (g) Noise Criteria Categories means the groups of preference for sound levels established in accordance with NZS 6806 when determining the Best Practicable Option for noise mitigation (i.e. Categories A, B and C);

|                        |     | <ul><li>(h) NZS 6806 – means New Zealand Standard NZS 6806:2010 Acoustics –<br/>Road-traffic noise – New and altered roads;</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                        |     | <ul> <li>(i) Protected Premises and Facilities (PPFs) – means only the premises and<br/>facilities identified in green, orange or red in Schedule 2: Identified PPFs<br/>Noise Criteria Categories;</li> </ul>                                                                                                                                                                                                                                                                                                                                              |
|                        |     | (j) Selected Mitigation Options – means the preferred mitigation option<br>resulting from a Best Practicable Option assessment undertaken in<br>accordance with NZS 6806 taking into account any low noise road surface<br>to be implemented in accordance with Condition 28; and                                                                                                                                                                                                                                                                           |
|                        |     | (k) Structural Mitigation – has the same meaning as in NZS 6806.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| NoRs 1, 2, 3<br>and 4a | 30. | The Noise Criteria Categories identified in Schedule 2: Identified PPFs Noise Criteria Categories at each of the PPFs shall be achieved where practicable and subject to Conditions 29 to 41 (all traffic noise conditions).                                                                                                                                                                                                                                                                                                                                |
|                        |     | Achievement of the Noise Criteria Categories for PPFs shall be by reference to a traffic forecast for a high growth scenario in a design year at least 10 years after the programmed opening of the Project.                                                                                                                                                                                                                                                                                                                                                |
| NoRs 1, 2, 3<br>and 4a | 31. | As part of the detailed design of the Project, a Suitably Qualified and Experienced Person shall determine the Selected Mitigation Options for the PPFs identified on Schedule 2: Identified PPFs Noise Criteria Categories.                                                                                                                                                                                                                                                                                                                                |
|                        |     | For the avoidance of doubt, the low noise road surface implemented in accordance with Condition 28 may be (or be part of) the Selected Mitigation Option(s).                                                                                                                                                                                                                                                                                                                                                                                                |
| NoRs 1, 2, 3<br>and 4a | 32. | Prior to construction of the Project, a Suitably Qualified and Experienced Person shall develop the Detailed Mitigation Options for the PPFs identified in Schedule 2: Identified PPFs Noise Criteria Categories, taking into account the Selected Mitigation Options.                                                                                                                                                                                                                                                                                      |
| NoRs 1, 2, 3<br>and 4a | 33. | If the Detailed Mitigation Options would result in the Identified Noise Criteria Category changing to a less stringent Category, e.g. from Category A to B or Category B to C, at any relevant PPF, a Suitably Qualified and Experienced Person shall provide confirmation to the Manager that the Detailed Mitigation Option would be consistent with adopting the Best Practicable Option in accordance with NZS 6806 prior to implementation.                                                                                                            |
| NoRs 1, 2, 3<br>and 4a | 34. | The Detailed Mitigation Options shall be implemented prior to completion of construction of the Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| NoRs 1, 2, 3<br>and 4a | 35. | Prior to the Start of Construction, a Suitably Qualified and Experienced Person shall identify those PPFs which, following implementation of all the Detailed Mitigation Options, will not be Noise Criteria Categories A or B and where Building-Modification Mitigation might be required to achieve 40 dB L <sub>Aeq(24h)</sub> inside Habitable Spaces ('Category C Buildings').                                                                                                                                                                        |
| NoRs 1, 2, 3<br>and 4a | 36. | Prior to the Start of Construction in the vicinity of each Category C Building, the Requiring Authority shall write to the owner of the Category C Building requesting entry to assess the noise reduction performance of the existing building envelope. If the building owner agrees to entry within three months of the date of the Requiring Authority's letter, the Requiring Authority shall instruct a Suitably Qualified and Experienced Person to visit the building and assess the noise reduction performance of the existing building envelope. |
| NoRs 1, 2, 3<br>and 4a | 37. | For each Category C Building identified, the Requiring Authority is deemed to have complied with Condition 36 above if:                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|                        |     | (a) The Requiring Authority's Suitably Qualified and Experienced Person has visited the building and assessed the noise reduction performance of the building envelope; or                                                                                                                                                                                                                                                                                                                                                                                  |

|                        |     | (b) The building owner agreed to entry, but the Requiring Authority could not gain entry for some reason (such as entry denied by a tenant); or                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                        |     | (c) The building owner did not agree to entry within three months of the date of the Requiring Authority's letter sent in accordance with Condition 36 above (including where the owner did not respond within that period); or                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|                        |     | (d) The building owner cannot, after reasonable enquiry, be found prior to<br>completion of construction of the Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                        |     | If any of (b) to (d) above apply to a Category C Building, the Requiring Authority is not required to implement Building-Modification Mitigation to that building.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| NoRs 1, 2, 3<br>and 4a | 38. | Subject to Condition 37 above, within six months of the assessment undertaken in accordance with Conditions 36 and 37, the Requiring Authority shall write to the owner of each Category C Building advising:                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                        |     | (a) If Building-Modification Mitigation is required to achieve 40 dB L <sub>Aeq(24h)</sub> inside habitable spaces; and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|                        |     | (b) The options available for Building-Modification Mitigation to the building, if required; and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|                        |     | (c) That the owner has three months to decide whether to accept Building-<br>Modification Mitigation to the building and to advise which option for Building-<br>Modification Mitigation the owner prefers, if the Requiring Authority has advised<br>that more than one option is available.                                                                                                                                                                                                                                                                                                                                                                                         |
| NoRs 1, 2, 3<br>and 4a | 39. | Once an agreement on Building-Modification Mitigation is reached between the Requiring Authority and the owner of a Category C Building, the mitigation shall be implemented, including any third party authorisations required, in a reasonable and practical timeframe agreed between the Requiring Authority and the owner.                                                                                                                                                                                                                                                                                                                                                        |
| NoRs 1, 2, 3<br>and 4a | 40. | Subject to Condition 37, where Building-Modification Mitigation is required, the Requiring Authority is deemed to have complied with Condition 39 if:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|                        |     | <ul> <li>(a) The Requiring Authority has completed Building Modification Mitigation to the building; or</li> <li>(b) An alternative agreement for mitigation is reached between the Requiring Authority and the building owner; or</li> <li>(c) The building owner did not accept the Requiring Authority's offer to implement Building-Modification Mitigation within three months of the date of the Requiring Authority's letter sent in accordance with Condition 37 (including where the owner did not respond within that period); or</li> <li>(d) The building owner cannot, after reasonable enquiry, be found prior to completion of construction of the Project.</li> </ul> |
| NoRs 1, 2, 3<br>and 4a | 41. | The Detailed Mitigation Options shall be maintained so they retain their noise reduction performance as far as practicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|                        |     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

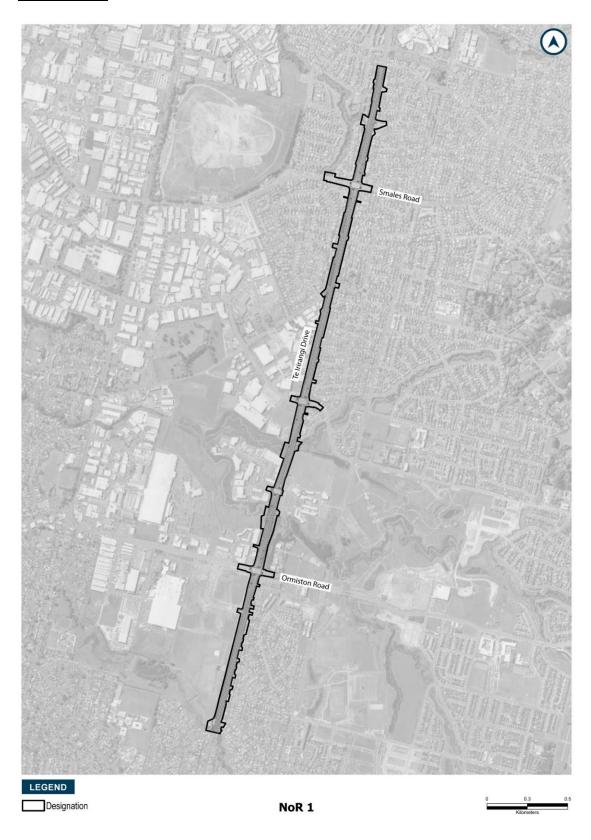

## Schedule 1: General accordance plans and information

#### NoR 1

The proposed work is for the construction, operation and maintenance of an upgrade to Te Irirangi Drive between Leixlep Lane and Rongomai Park to provide for a BRT corridor, walking and cycling facilities and associated infrastructure. The proposed work is shown in the following Concept Plan and includes:

- a) An upgrade of Te Irirangi Drive to accommodate centre-running BRT lanes, general traffic lanes, and walking and cycling facilities;
- b) Associated works including but not limited to intersections, bridges, embankments, retaining walls, culverts, stormwater management systems;
- c) Changes to local roads, where the proposed work intersects with local roads; and
- d) Construction activities, including vegetation removal, construction areas and the re-grading of driveways.

# **Concept Plan:**

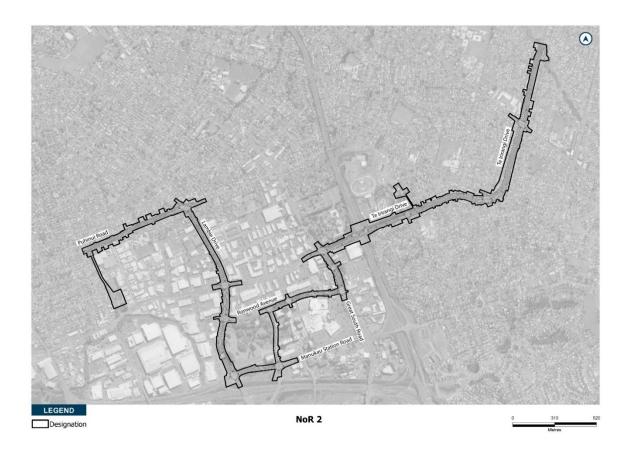

Page **23** of **146** 

## <u>NoR 2</u>

The proposed work is for the construction, operation and maintenance of an upgrade to Te Irirangi Drive, Great South Road, Ronwood Avenue, Davies Avenue, Manukau Station Road and Lambie Drive between Rongomai Park and Plunket Avenue for a BRT corridor, walking and cycling facilities and associated infrastructure. The proposed work is shown in the following Concept Plan and includes:

- a) An upgrade of Te Irirangi Drive, Great South Road, Ronwood Avenue, Manukau Station Road and Lambie Drive to accommodate centre-running BRT lanes, general traffic lanes and walking and cycling facilities;
- b) An upgrade of Davies Avenue to accommodate BRT lanes adjacent to Hayman Park, general traffic lane and walking and cycling facilities;
- c) Associated works including but not limited to intersections, bridges, embankments, retaining walls, culverts, stormwater management systems;
- d) Changes to local roads, where the proposed work intersects with local roads; and
- e) Construction activities, including vegetation removal, construction areas and the re-grading of driveways.

#### **Concept Plan:**

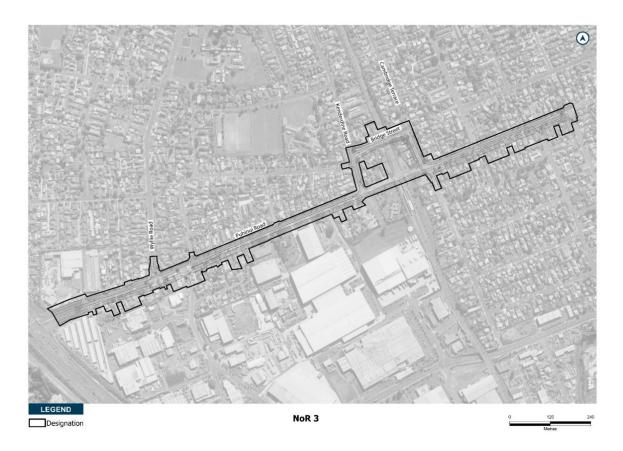

## <u>NoR 3</u>

The proposed work is for the construction, operation and maintenance of an upgrade to Puhinui Road between Rongomai Park and Plunket Avenue for a BRT corridor, walking and cycling facilities and associated infrastructure. The proposed work is shown in the following Concept Plan and includes:

- a) An upgrade of Puhinui Road to accommodate centre-running BRT lanes, general traffic lanes and walking and cycling facilities;
- b) An upgrade of Cambridge Terrace, Bridge Street and Kenderdine Road to provide for walking and cycling facilities;
- c) Associated works including but not limited to intersections, bridges, embankments, retaining walls, culverts, stormwater management systems;
- d) A bridge crossing the North Island Main Trunk line to connect the BRT to Puhinui Station;
- e) Changes to local roads, where the proposed work intersects with local roads; and
- f) Construction activities, including vegetation removal, construction areas and the re-grading of driveways.

#### **Concept Plan:**

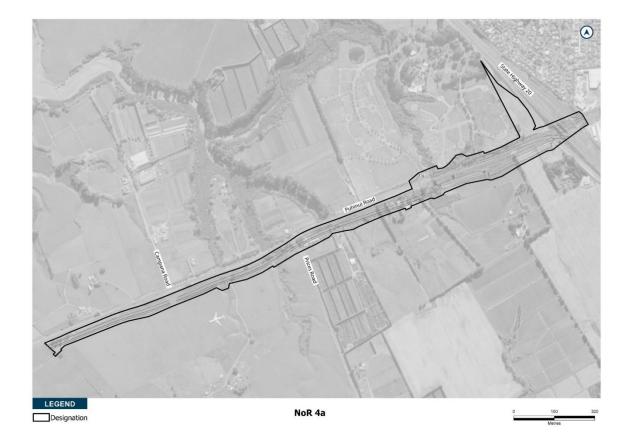

## NoR 4a

The proposed work is for the construction, operation and maintenance of an extension to Puhinui Road between the SH20/20B Interchange and Orrs Road for a BRT corridor, walking and cycling facilities and associated infrastructure. The proposed work is shown in the following Concept Plan and includes:

- a) An extension of Puhinui Road to accommodate BRT lanes (centre-running to Manukau Memorial Gardens, then south running to Orrs Road), general traffic lanes and walking and cycling facilities;
- b) Associated works including but not limited to intersections, bridges, embankments, retaining walls, culverts, stormwater management systems;
- c) Changes to local roads, where the proposed work intersects with local roads; and
- d) Construction activities, including vegetation removal, construction areas and the re-grading of driveways.

### **Concept Plan:**

# Schedule 2: Identified PPFs noise criteria categories

## NoR 1

| Address           | New or Altered Road | Noise Criteria Category |
|-------------------|---------------------|-------------------------|
| 4 Aaronville Way  | Altered             | Category B              |
| 6 Aaronville Way  | Altered             | Category B              |
| 8 Aaronville Way  | Altered             | Category A              |
| 8 Aaronville Way  | Altered             | Category B              |
| 10 Aaronville Way | Altered             | Category B              |
| 12 Aaronville Way | Altered             | Category B              |
| 28 Accent Drive   | Altered             | Category A              |
| 28 Accent Drive   | Altered             | Category A              |
| 28 Accent Drive   | Altered             | Category A              |
| 28 Accent Drive   | Altered             | Category A              |
| 28 Accent Drive   | Altered             | Category A              |
| 36 Accent Drive   | Altered             | Category A              |
| 12 Aclare Place   | Altered             | Category A              |
| 14 Aclare Place   | Altered             | Category A              |
| 15 Aclare Place   | Altered             | Category A              |
| 16 Aclare Place   | Altered             | Category A              |
| 17 Aclare Place   | Altered             | Category A              |
| 17 Aclare Place   | Altered             | Category A              |
| 19 Aclare Place   | Altered             | Category A              |

## 1 Introduction

This Assessment of Effects on the Environment (**AEE**) supports the Notices of Requirement (**NoRs**) for the Airport to Botany Bus Rapid Transit Project lodged by Waka Kotahi NZ Transport Agency (**Waka Kotahi**) and Auckland Transport as requiring authorities under the Resource Management Act 1991 (**RMA**). The NoRs propose four new designations for the Bus Rapid Transit (**BRT**) corridor and an alteration to Designation 6717 for State Highway 20B (**SH20B**).

This AEE and supporting technical assessments have been developed in an integrated manner. Whilst this Report covers all aspects of the Project, some aspects of this report will only be relevant to specific:

- · Geographical areas; or
- NoRs; or
- Components of the Project.

| Notice | Description                                                                                                                                                                                                                                                                                      | Requiring<br>Authority |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| NoR 1  | Widening of the existing Te Irirangi Drive between Botany Town Centre and Rongomai Park to provide for a Bus Rapid Transit corridor and high quality walking and cycling facilities.                                                                                                             |                        |
| NoR 2  | Widening of the following existing roads to provide for a Bus Rapid Transit corridor and high quality walking and cycling facilities:                                                                                                                                                            |                        |
|        | <ul> <li>Te Irirangi Drive (between Rongomai Park and SH1)</li> <li>Great South Road (between SH1 and Ronwood Avenue intersection)</li> <li>Ronwood Avenue (between Great South Road intersection and Davies Avenue)</li> </ul>                                                                  |                        |
|        | <ul> <li>Davies Avenue (between Ronwood Avenue and Manukau Station Road)</li> <li>Manukau Station Road (between Davies Avenue and Lambie Drive)</li> <li>Lambie Drive (between Manukau Station Road and Puhinui Road)</li> <li>Puhinui Road (between Lambie Drive and Plunket Avenue)</li> </ul> |                        |
| NoR 3  | Widening of the existing Puhinui Road between Plunket Avenue and east of the SH20/20B Interchange, including a BRT bridge connecting to Puhinui Station.                                                                                                                                         |                        |
|        | This widening will provide for a Bus Rapid Transit corridor and high quality walking and cycling facilities.                                                                                                                                                                                     |                        |
|        | Widening is also proposed for Cambridge Terrace, Bridge Street and Kenderdine Road to provide for high quality walking and cycling facilities                                                                                                                                                    |                        |
| NoR 4a | Extension of Puhinui Road between the SH20/20B Interchange and Orrs Road to provide for a Bus Rapid Transit corridor and high quality walking and cycling facilities.                                                                                                                            |                        |
| NoR 4b | Widening of SH20B corridor between the SH20/20B interchange and the intersection of Manukau Memorial Gardens. This is an alteration to the existing Waka Kotahi Designation 6717 to provide westbound lanes to                                                                                   | NZ Transport<br>Agency |

| Auckland Airport, high quality walking and cycling facilities and a ramp from SH20B onto SH20 for southbound traffic while enabling the provision of a |  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Bus Rapid Transit corridor.                                                                                                                            |  |

Figure 1: Overview of the NoRs for the Airport to Botany Project

## 1.1 The Airport to Botany project

The overall Airport to Botany Bus Rapid Transit Project will provide an 18 km, dedicated, high capacity, reliable, and frequent BRT corridor and walking and cycling facilities. The Project will improve connections between the major centres of Botany, Manukau, Auckland Airport and their employment areas to existing and intensifying residential areas in southern and eastern Auckland.

Auckland Transport and Waka Kotahi are seeking to authorise a 14.9 km portion of the overall Project which extends from the south of Botany Town Centre to Orrs Road (**Project**). The remainder of the overall Project will be delivered separately by:

- Auckland Airport BRT corridor and walking and cycling facilities between Orrs Road and the Airport including a bridge across Pūkaki Creek; and
- The Eastern Busway Alliance Botany Station.

## 1.2 The Requiring Authorities

## 1.2.1 Auckland Transport

Auckland Transport is financially responsible for Auckland's transport network and services (excluding state highways), including roads, footpaths, cycling, parking and public transport services such as rail. Auckland Transport is a Council-controlled Organisation under the Local Government (Auckland Council) Act 2009 (LGACA), which states that Auckland Transport's purpose is to "contribute to an effective, efficient and safe Auckland land transport system in the public interest".

Auckland Transport's functions are identified in section 45 of the LGACA and include managing and controlling the Auckland Transport system in accordance with the LGACA, including performing the statutory functions and exercising the statutory powers set out in section 46 as if Auckland Transport were a local authority or other statutory body, and acting as a Requiring Authority under section 167 of the RMA.

Under section 47(1) of the LGACA, Auckland Transport is deemed to be approved as a Requiring Authority, as a network utility operator, under section 167 of the RMA for the purpose of "constructing or operating or proposing to construct or operate roads in relation to the Auckland transport system" and "the carrying out of an activity or a proposed activity (other than an activity described in paragraph (a)) in relation to the Auckland transport system for which it or the Auckland Council has financial responsibility". Subsequently, Auckland Transport may designate land to construct, operate and maintain roads and any other activities in relation to the Auckland transport system that Auckland Council has financial responsibility for.

In the context of this Project, Auckland Transport is the Requiring Authority for NoRs 1 to 4a.

#### 1.2.2 NZ Transport Agency

The Land Transport Management Act 2003 (**LTMA**) provides the statutory framework for New Zealand's land transport system and is the statute under which NZ Transport Agency operates (in conjunction with the Government Roading Powers Act 1989 (**GRPA**) and the Land Transport Act 1998 (**LTA**)).

The NZ Transport Agency's principal objective under section 94 of the LTMA is "to undertake its functions in a way that contributes to an effective, efficient, and safe land transport system in the public interest". The NZ Transport Agency functions are set out in section 95(1) and the principles under which it must operate are affirmed in section 96 of the LTMA.

Section 95 (1)(h) of the LTMA includes the management of "the State highway system (including its planning, funding, design, supervision, construction, maintenance, and operation) in accordance with this Act and the Government Roading Powers Act 1989"

Section 95 (1)(i) of the LTMA sets out the function of overseeing "the planning, operation, implementation, and delivery of public transport (including issuing guidelines for regional public transport plans)"

Section 61 of the GRPA sets out the powers and duties of the Transport Agency in relation to state highways. NZ Transport Agency has the sole powers of control for all purposes, including construction and maintenance, of all state highways under the GRPA. Further, section 88 states that the Transport Agency is able to declare a state highway, or part of a state highway, a limited access road.

NZ Transport Agency was approved under section 167 of the RMA as a Requiring Authority by three gazette notices in 1992, 1994 and 2015.

Pursuant to the 1994 notice, the Transport Agency may designate land, water, subsoil or airspace for the "construction and operation (including the maintenance, improvement, enhancement, expansion, realignment and alteration) of any State highway or motorway pursuant to the GRPA". Under the 2015 notice, NZ Transport Agency may also designate land, water, subsoil or airspace for "the purpose of constructing or operating (or proposing to construct or operate) and maintaining cycleways and shared paths in New Zealand pursuant to the GRPA and the LTMA.

In the context of this Project, NZ Transport Agency is the Requiring Authority for NoR 4b (alteration to Designation 6717).

#### 1.2.3 Notification

Auckland Transport for NoRs 1 to 4a and NZ Transport Agency for NoR 4b – Alteration to Designation 6717 request that the notices are publicly notified.

### 1.2.4 Background and context

The overall project is part of the Southwest Gateway Programme (**Programme**), a programme of investments aiming to deliver transformative improvements to address critical transport-related issues in Auckland's south-western, southern, and eastern suburbs. Te Ākitai Waiohua, Auckland Transport, Waka Kotahi, and Auckland Airport are programme partners and are working together to deliver the Project.

Te Tupu Ngātahi Supporting Growth (**Te Tupu Ngātahi**) is a collaboration between Auckland Transport and Waka Kotahi to investigate and plan transport investment in Auckland's future growth areas over the next 10 to 30 years. Auckland Transport and Waka Kotahi have partnered with Auckland Council and Manawhenua and are working closely with stakeholders and the community to develop the strategic transport network to support growth and intensification in Auckland.

In December 2021, Te Tupu Ngātahi, was tasked with designating the Project. Therefore, Te Tupu Ngātahi, on behalf of Auckland Transport and Waka Kotahi has prepared the NoRs for the construction, operation and maintenance of the Project.

## 1.3 Need for the Project

Auckland's south-western, southern and eastern areas is home to a significant population of 360,000 people and includes two of the seven metropolitan centres in Auckland, a substantial growth area at Ormiston and two of Auckland's largest employment areas at the Airport and in East Tāmaki.

Public transport is currently provided by standard bus services, with no direct connection to Manukau or the Airport from Auckland's eastern areas. Without a new rapid transit connection, large areas of southern and eastern Auckland will remain only partially served by the Rapid Transit Network (**RTN**).

People living in southern Auckland are heavily dependent on access to Manukau Central, the Airport and East Tāmaki for employment. These areas are not easily accessible by the existing public transport network.

In summary, the following key transport-related issues were identified in the business case process:

- A large gap in the RTN in the southern and eastern suburbs resulting in a poor mode share (refer to Figure 2);
- Poor quality access to employment, including Auckland Airport, Manukau Central, East Tāmaki and community facilities; and
- Increased pressure on the existing transport network as a result of intensification of residential land.

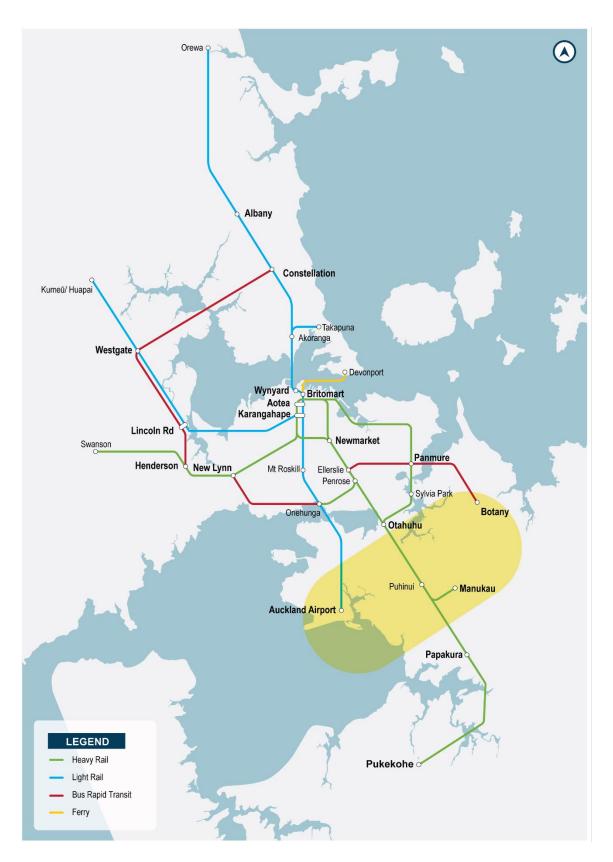

Figure 2: Map showing Auckland's existing and proposed RTN. Area in yellow illustrates the gap in the RTN

The proposed designations for the Project are critical to address the identified issues.

If the Project is not protected now, this may result in a lack of certainty around the investment in public and private development, and locations for nationally directed intensification. Efficient, transport networks are vital for the success of centres and neighbourhoods as they provide safe, accessible and sustainable travel choices that connect communities and encourage a shift from private vehicles to public and active transport.

## 2 Partnership with Manawhenua

Auckland Transport and Waka Kotahi recognise and respect Te Tiriti o Waitangi as Te Tūāpapa (foundation). This underpins the way Auckland Transport and Waka Kotahi partner with Manawhenua, to build strong, meaningful and enduring relationships.

Partnership in the context of this Project is a commitment to ongoing and regular engagement with Manawhenua at all levels (including governance and katiaki) in a manner that is open and transparent to ensure Manawhenua continue to have the space and resources to influence decision making in all phases of the Project.

The sections to follow summarise the partnership with Manawhenua to date and include:

- Partnership through previous phases of the Project;
- Partnership through Te Tupu Ngātahi; and
- The development of a framework for future phases of the Project.

## 2.1 Partnership in previous phases of the Project

Manawhenua have been involved in all previous phases of the Project. Engagement with Manawhenua first commenced in 2018 as part of the Southwest Gateway Programme. This involved monthly hui and project workshops over the course of the previous business case process to seek feedback from Manawhenua on key project decisions through the Auckland Transport's Southern Mana Whenua Table.

## 2.1.1 Te Ākitai Waiohua

The overall project traverses the Puhinui peninsula, which is of significant cultural value to Manawhenua, in particular Te Ākitai Waiohua. To recognise the significance of the area to Te Ākitai Waiohua and facilitate their ongoing involvement in the development of the Project, Auckland Transport and Waka Kotahi partnered with Te Ākitai Waiohua for the development of the Programme.

Te Ākitai Waiohua are the owners of Pūkaki and Waokauri Creeks (which includes areas of Māori Reservation). These areas are highly significant to Te Ākitai Waiohua. Te Ākitai Waiohua also has a longstanding involvement in the area's development, including as a signatory party to the Eastern Access Agreement signed in 1991, the development of the Puhinui Structure Plan and the Puhinui Precinct in the Auckland Unitary Plan Operative in Part (AUP:OP).

Through the Eastern Access Agreement, it was agreed that the form of the bridge over Pūkaki Creek would remain as a two-lane bridge in perpetuity. This bridge is located to the west of Orrs Road and is a crucial element for the future connection of the Project to Auckland Airport. Discussions on this agreement are being progressed between the four programme partners. These discussions will continue post lodgement of the Project NoRs.

## 2.2 Partnership through NoR phase

Following the commencement of the NoR phase of the Project, all Manawhenua iwi representatives who were previously involved in the Project (through the business case stage) were invited to engage

in the NoR phase. To date, the following Manawhenua partners have been actively involved in the preparation of the NoRs:

- Te Ākitai Waiohua;
- Ngāi Tai ki Tāmaki;
- Ngāti Tamaoho;
- Ngaati Whanaunga;
- Ngāti Te Ata Waiohua;
- Ngāti Maru;
- Ngāti Tamaterā;
- Te Ahiwaru Waiohua; and
- Ngāti Paoa Trust Board.

The Project Team's engagement with Manawhenua is primarily enacted through the established Southern Te Tupu Ngātahi monthly hui and Project specific hui which is attended by representatives of the iwi identified above. These hui have provided several opportunities for kōrero and knowledge sharing.

Site visits were also held with Manawhenua, meeting at key locations of interest along the Project corridor. These site visits were followed by workshops to map out sites of significance to Manawhenua, opportunities within the Project to acknowledge cultural landscapes, and iwi aspirations for the Project.

The Project Team recognise the importance of te taiao to Manawhenua. In particular, through ongoing korero at the Southern Te Tupu Ngātahi hui, it was acknowledged that the environment is steeped in cultural history for iwi Māori through whakapapa, and the interconnectivity of people, place, and nature.

The Project Team has engaged in several discussions with Manawhenua to map out the cultural landscapes. This is discussed further below.

The cultural values and narrative shared by Manawhenua has guided the development of the conditions for the proposed designations and alteration to Designation 6717 (see Figure 3). These conditions set out a framework to identify Project specific opportunities to acknowledge and respond to the cultural landscape within the Project corridor and surrounding areas.

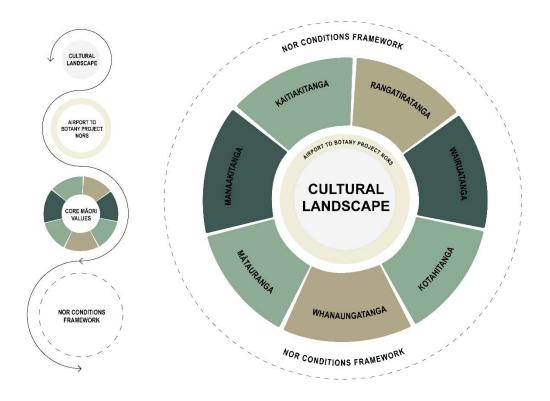

Figure 3: Manawhenua partnership through the Project

Three key elements were discussed in collaboration with Manawhenua. These are detailed in the subsequent sections:

- Cultural landscape;
- Core Māori values and project specific outcomes; and
- Actions (refer to Section 9.2).

## 2.2.1 Cultural landscape

Manawhenua shared that the Project traverses a significant cultural landscape through korero at hui, site visits and Cultural Values Assessments (**CVA**) prepared for the current and previous phases of the Project. Manawhenua identified that maunga, moana, awa, marae and papakainga are key features of their identity and form the wider cultural context:

- Maunga hold a paramount place in the historical, spiritual, ancestral and cultural identity of the iwi
  and hapū of Tāmaki Makaurau.
- Moana and awa have their own value through cultural, historic and traditional links with specific streams, rivers, wetlands, lakes, springs, and other water bodies. Mauri is a binding force that sustains all life and is strongly present in water.
- Marae and papakāinga can be seen as both a physical and spiritual location, a collection of buildings, an anchoring to the land, a place where people meet and the community of related people itself.

Figure 4 below acknowledges the key features that Manawhenua have shared. These constitute part of the wider cultural context with respect to the Project.

Figure 5 provides an overview of the following key areas of interest that were identified in the CVA prepared by Te Ākitai Waiohua for the previous business case phase, specific to the Puhinui area:

- The Puhinui Peninsula is an important area in the history, stories, whakapapa and mythology of Te Ākitai Waiohua;
- Pūkaki and Waokauri Creeks have Māori Reservation status, meaning they are held for the common use or benefit of Te Ākitai Waiohua;
- The Pūkaki marae is on the northern bank of the Waokauri Creek;
- There are many recorded archaeological sites and evidence of widespread occupation in the area by Manawhenua during pre-European times. These are generally concentrated around Pūkaki Creek, Waokauri Creek, and Crater Hill (Ngā Kapua Kohuora);
- Volcanic cones, such as Ngā Kapua Kohuora; and
- Other significant sites include Papāhinau, Mimiti Te Arero historic settlements and the Manukau Harbour.

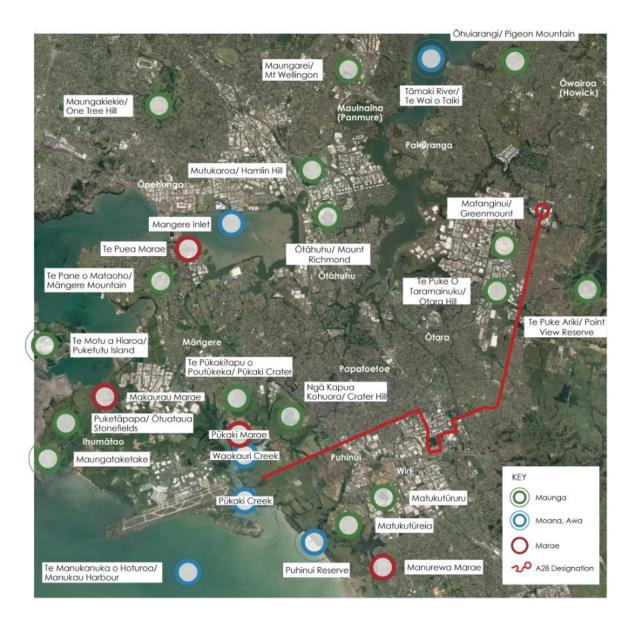

Figure 4: Map showing the Project in the context of a wider cultural landscape

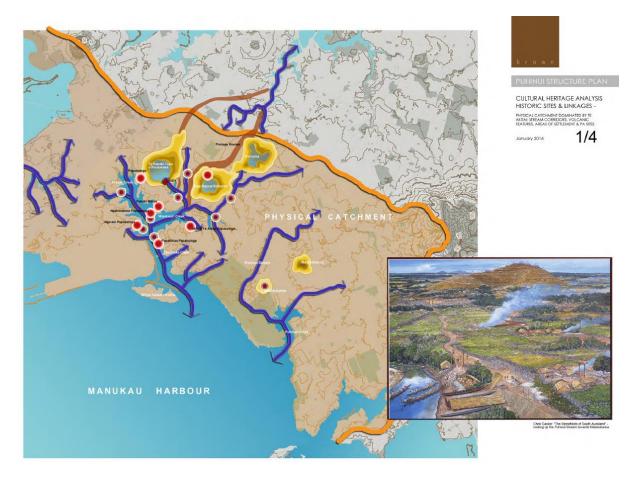

Figure 5: Puhinui Structure Plan - Cultural heritage analysis - historic sites and linkages (Stephen Brown, January 2016)

#### 2.2.2 Core Māori values

Through discussions with Manawhenua, seven core Māori values were identified as underpinning the partnership between Manawhenua and the Project Team in the context of the Project.

These values provide an insight into Māori concepts and beliefs. The Project Team worked closely with Manawhenua to understand how these values can be interpreted with respect to the Project. This is set out below.

- Rangatiratanga Manawhenua perform their role as Partners through all phases of the Project;
- Katiakitanga The mauri of the natural and cultural landscapes is restored, enhanced and protected;
- Manaakitanga Future Project decisions are undertaken in a way that recognises the obligation
  of Mana Whenua to be good hosts;
- **Wairuatanga** The sense of belonging associated with the spiritual connection Manawhenua have to maunga, moana, awa and marae in the vicinity of the Project area and the wider cultural context is recognised through the future design of the Project;
- **Kotahitanga** All phases of the Project are undertaken in a cohesive manner which strengthens the relationship between Mana Whenua and wider Project stakeholders;
- **Whanaungatanga** Through the integration of the Project into the surrounding landscape, people's experience and sense of belonging is enriched; and

• **Mātauranga** – The intergenerational knowledge Manawhenua have through whakapapa is shared where appropriate, valued and utilised in future Project decisions.

Notwithstanding the above descriptions, it is recognised that the interpretation of the core values and what this looks like through future design can only be facilitated by Manawhenua as Partners in all phases of the Project.

Section 9.2 sets out how the framework has been applied in the development of the conditions for the proposed designations and alteration to Designation 6717.

## 3 Project description

This AEE specifically relates to a 14.9 km portion of the overall Project and primarily involves the upgrade and widening of existing transport corridors to provide for a dedicated BRT corridor and high-quality walking and cycling facilities.

Nine BRT stations are proposed as part of the Project. These stations are generally located at signalised intersections and will be staggered on either side of the intersection as shown in Figure 6

These stations are situated in the following locations:

- Smales Road;
- Accent Drive;
- Ormiston Road Botany Junction Shopping Centre;
- Dawson Road;
- Diorella Drive;
- Ronwood Avenue (Manukau Central);
- Manukau Station;
- Puhinui Road/Lambie Drive; and
- Puhinui Station.

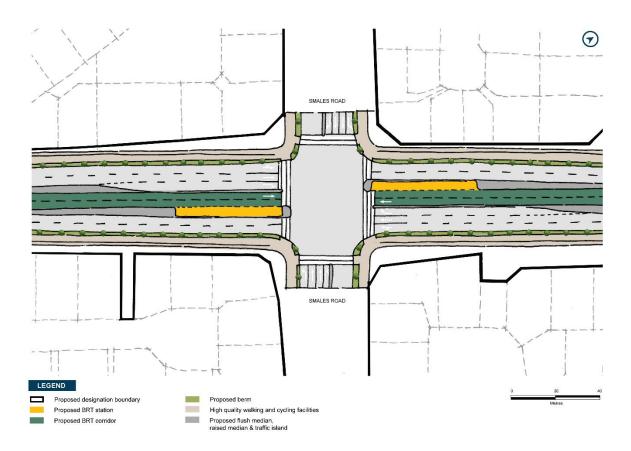

Figure 6: Indicative sketch of BRT station layout

As part of the Project, two new structures are proposed:

- A BRT bridge crossing the North Island Main Trunk (NIMT) and connecting to the concourse level
  of the Puhinui Station (see Figure 7); and
- A southbound ramp from SH20B to SH20 (see Figure 8).

Upgrades to existing structures are proposed at the:

- Bridge over Otara Creek (NoR 1);
- Bridge over SH1 (NoR 2);
- Bridge over NIMT (NoR 3); and
- Bridge over Waokauri Creek (NoR 4a).

Figure 7: Indicative sketch of the BRT bridge connecting to the existing Puhinui Station

Figure 8: Indicative sketch of the southbound ramp from SH20B to SH20 (viewpoint from Puhinui Road looking west, towards Auckland Airport)

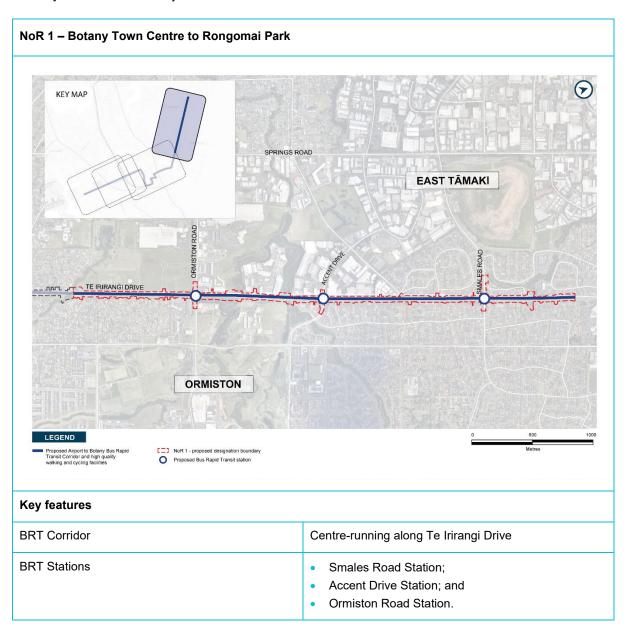

Once implemented, the Project will provide:

- A regular and even service pattern so that people can arrive at stations and use the service without the need to refer to a timetable; and
- Evenly spaced BRT stations with bicycle parking and off-board ticketing to reduce dwell times of these services.

To assess the varied environment that the Project passes through, the Project has been split into four sections:

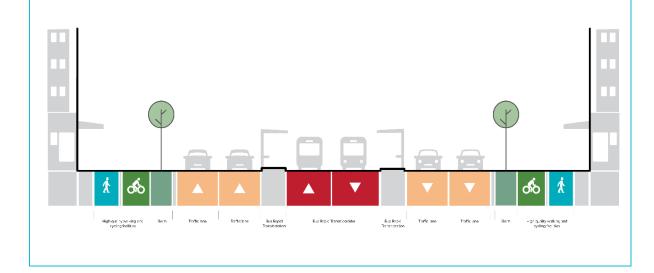

- Botany Town Centre to Rongomai Park (NoR 1);
- Rongomai Park to Puhinui Station, in the vicinity of Plunket Avenue (NoR 2);
- Puhinui Station, in the vicinity of Plunket Avenue to the SH20/SH20B Interchange (NoR 3); and
- SH20/SH20B Interchange to Orrs Road (NoR 4a (Auckland Transport)) and the intersection of Manukau Memorial Gardens (NoR 4b (alteration to Designation 6717 – NZ Transport Agency).

The key features of the Project across each of the NoRs are outlined in the tables below.

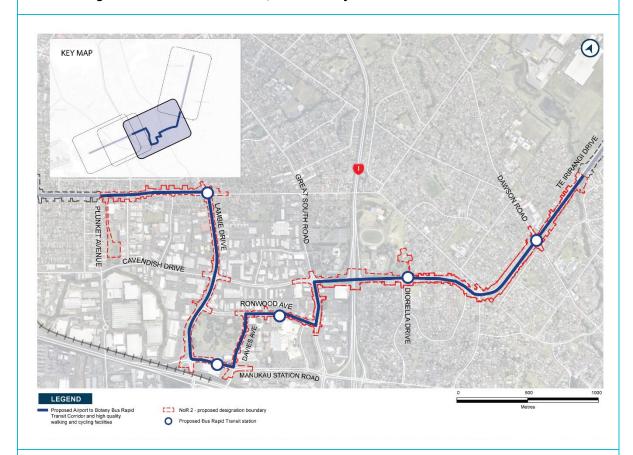

| Walking and cycling facilities | Walking and cycling facilities on both sides of the corridor                                                                                                                                             |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General traffic                | Two lanes in each direction (existing)                                                                                                                                                                   |
| Access                         | There is an existing central median along the majority of Te Irirangi Drive which restricts right-turn access                                                                                            |
| Speed environment              | 50 km/h                                                                                                                                                                                                  |
| Signalised intersections       | <ul> <li>Te Irirangi Drive and Smales Road;</li> <li>Te Irirangi Drive and Accent Drive;</li> <li>Te Irirangi Drive and Bishop Dunn Avenue; and</li> <li>Te Irirangi Drive and Ormiston Road.</li> </ul> |
| Stormwater infrastructure      | Swales; and     Wetlands.                                                                                                                                                                                |

## NoR 1 typical cross section

## 4 Section 171 of the Resource Management Act 1991

Section 171 of the RMA sets out the matters that a territorial authority must (subject to Part 2), have particular regard to when considering the effects on the environment of allowing a Requirement. These matters are set out in the table below:

| Matters to consider                                                                                                                                                                                                                                                                                                                                                   | Section of the AEE<br>where the matter is<br>primarily addressed |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| Whether particular regard has been had of any relevant provision of <sup>1</sup>                                                                                                                                                                                                                                                                                      | Section 12.2                                                     |
| <ul> <li>a) A national policy statement;</li> <li>b) A New Zealand coastal policy statement;</li> <li>c) A regional policy statement or proposed regional policy statement;</li> <li>d) A plan or proposed plan</li> </ul>                                                                                                                                            | Appendix B                                                       |
| <ul> <li>Whether adequate consideration has been given to alternative sites, routes or methods of undertaking the work if<sup>2</sup>:</li> <li>a) The requiring authority does not have an interest in the land sufficient for undertaking the work; or</li> <li>b) It is likely that the work will have a significant adverse effect on the environment.</li> </ul> | Section 4.1 Appendix A                                           |
| Whether the work and designation are reasonably necessary for achieving the objectives of the requiring authority for which the designation is sought <sup>3</sup>                                                                                                                                                                                                    | Section 4.2                                                      |
| Any other matter the territorial authority considers reasonably necessary in order to make a recommendation on the requirement <sup>4</sup>                                                                                                                                                                                                                           | Section 12.3                                                     |

## 4.1 Consideration of alternatives

A detailed assessment of alternatives was undertaken for the Project. This section provides an overview of the alternatives assessment process which commenced in 2018. This summary should be read in conjunction with the full assessment which sets out the process undertaken and is provided in the Alternatives Assessment Report attached at Appendix A to the AEE.

Options for the rapid transit route and mode were considered using a Multi-Criteria Analysis (**MCA**) and expert judgement. The assessment process was iterative with inputs from partners, stakeholders, and the public.

Generally, the assessment process has followed a long list – short list – recommended option process, starting at the broadest feasible area and progressively narrowing the area to a single preferred route.

28 initial route and mode options were developed. These options were then assessed through a high-level sieving process. Options did not progress if they were infeasible or determined to have high implementation risks. The 10 remaining route options formed the long list and progressed through an MCA process.

Following the long list assessment, broadly six options progressed to the short list. These options are set out in the Figure below:

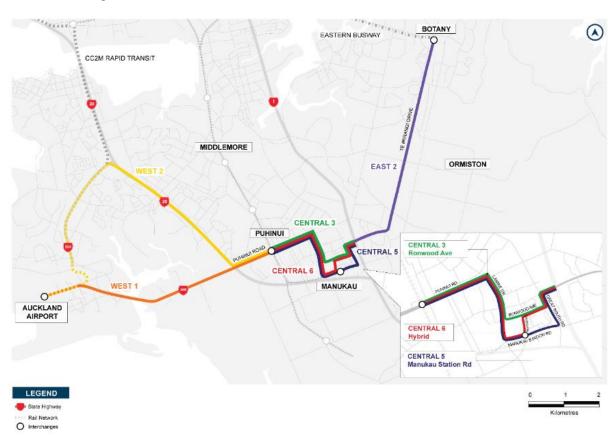

Figure 9: Map showing short list of options considered for the Project

Following the short list assessment and the consideration of partner and stakeholder feedback, the preferred Project route was identified. This followed Te Irirangi Drive, Great South Road, Ronwood Avenue, Davies Avenue, Manukau Station Road, Lambie Drive, Puhinui Road and SH20B.

Following the confirmation of the preferred Project route from Botany to the Airport, the process of identifying the preferred Project mode (i.e. Bus Rapid Transit or Light Rail Transit) was carried out. This involved customer research, local and international expertise and feedback from programme partners, Manawhenua and stakeholders. A Bus Rapid Transit mode was preferred for the Project based on forecasted demand in 2038.

Additional assessments were undertaken to determine the bus rapid transit corridor placement, side of road widening, station locations, and walking and cycling facility placement. In summary, these assessments concluded:

- The provision of centre-running BRT corridor with the exception of Davies Avenue and SH20B;
- Location and number of BRT stations; and
- The provision of high quality walking and cycling facilities including along Cambridge Terrace,
   Bridge Street and Kenderdine Road.

A gap analysis was undertaken in 2022 following the approval of the SSBC by the Auckland Transport and Waka Kotahi Boards. The purpose of the gap analysis was twofold – to test:

- That alternative options proportional to the scale of potential effects were considered (in accordance with section 171(1)(b) of the RMA); and
- Whether new information had emerged since the completion of the SSBC that would alter the Project.

The gap analysis concluded that some parts of the alignment required further testing based on the above. Following this process, a change was made to the side of road assessment for Puhinui Road.

The completion of this process ultimately informed the recommended Project to progress to the NoR stage. As set out in Appendix A of this AEE, adequate consideration has been given to alternative sites, routes and methods in a manner that is transparent, robust and replicable.

# 4.2 Whether the work and designation are reasonably necessary for achieving the objectives

Section 171(1)(c) of the RMA states that:

"When considering a requirement and any submissions received, a territorial authority must, subject to Part 2, consider the effects on the environment of allowing the requirement, having particular regard to—

. . .

(c) whether the work and designation are reasonably necessary for achieving the objectives of the requiring authority for which the designation is sought;"

The project objectives for the Project have been developed with section 171(1)(c) of the RMA tests in mind. Specifically, particular regard to project objectives is had:

- a) In the context of considering effects on the environment; and
- b) Expressly subject to Part 2 of the RMA.

Therefore, the Project objectives do not have a Part 2 or "effects management" (e.g. avoid, remedy or mitigate effects on the environment) focus but instead have been developed to:

- a) Be outcomes focused and definitive of the Project; and
- b) Provide a clear line of sight from the SSBC investment objectives in a manner that reflects that the investment objectives and project objectives are developed for two different purposes.

Having regard to the above, the following project objectives have been developed. Table 1 below illustrates how the line of sight between the Project objectives and the SSBC investment objectives:

Table 1: Line of sight between SSBC Investment Objectives and RMA Project Objectives

| Relevant NoR/s | SSBC Investment Objectives                                                                                                                                                                                                                                                                                                                                                                                                                             | RMA Project Objectives                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NoRs 1 – 4a    | Investment Objective 1: More equitable access and travel choices to jobs, learning, cultural and social activities in the south and east of Auckland.  Investment Objective 2: Reliable and resilient transport system in south and east Auckland that is easy to use.  Investment Objective 3: Transport network that enables the efficient movement of goods and people.  Investment Objective 4: Urban regeneration and improved built environment. | Enable the provision of public transport and active mode corridors in a manner that:  a) Is safe for all transport users b) Connects Orrs Road (Auckland Airport boundary), with Manukau City Centre and Botany Town Centre. c) Includes efficient, resilient & reliable dedicated public transport and active mode infrastructure. d) Contributes to mode shift by improving travel choice and access to key destinations along the corridors. e) Connects to existing and planned public transport stations f) Integrates with the existing and planned future environments. |

|        | Investment Objective 5: Reduce impact of the transport system on the environment and Taonga. | g) Recognises the future strategic function of the corridor                                                                                                                                            |
|--------|----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NoR 4b | Investment Objective 6: Safe and secure transport facilities in south and east Auckland.     | Provide for the maintenance, operation and improvement of the State Highway 20B corridor while enabling the implementation and delivery of a cycleway and shared path and a public transport corridor. |

With respect to Section 171(1)(c) of the RMA, it is considered that:

- a) Reasonably allows for some tolerance in terms of where necessary falls; and
- a) Necessary falls somewhere between desirable and essential.

With this in mind, it is considered that the "reasonable necessity" test allows for a threshold assessment, proportionate to the circumstances to determine whether the Project is justified in the context of Section 171(1)(c) of the RMA.

The following provides an assessment of whether the work and designation are reasonably necessary for achieving the Project objectives:

| NoR          | RMA Objective                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The proposed designations and alteration to Designation 6717 are reasonably necessary to achieve the Project Objectives because they provide for:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NoRs 1 to 4a | Enable the provision of public transport and active mode corridors in a manner that:  a) Is safe for all transport users; b) Connects Orrs Road (Auckland Airport boundary), with Manukau City Centre and Botany Town Centre; c) Includes efficient, resilient and reliable dedicated public transport and active mode infrastructure; d) Contributes to mode shift by improving travel choice and access to key destinations along the corridors; e) Connects to existing and planned public transport stations; f) Integrates with the existing and planned future environment; and g) Recognises the future strategic function of the corridor. | Auckland's south-western, southern and eastern areas is home to a significant population. Currently, public transport within these areas is provided by standard bus service and only partially served by rapid transit, with no direct connections to key employment areas such as Manukau and Auckland Airport.  Within these areas, there is also a lack of safe and separated walking and cycling facilities which means that cyclists need to share road space with general traffic along major arterial corridors.  Future growth is projected for Auckland, including the southern and eastern areas and this is likely to increase pressure on the existing transport network.  The Transport chapter of this AEE (Section 9.3) demonstrates that the Project addresses these issues by providing:  A BRT corridor which will improve access |
| NoR 4b       | Provide for the maintenance, operation and improvement of the State Highway 20B corridor while enabling the implementation and delivery of a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | between Botany, Manukau and the Airport                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| cycleway and shared path and a public transport corridor. | <ul> <li>Separated walking and cycling facilities<br/>which will increase mode shift and improve<br/>safety for all users.</li> </ul> |
|-----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
|                                                           | Therefore, the Project is reasonably necessary to meet the Project objectives.                                                        |

## 5 Lapse period sought and rationale

In accordance with section 184(1) of the RMA, a designation lapses five years after it is included in the District Plan unless:

- a) It has been given effect to; or
- b) Within three months of the designation lapsing, the territorial authority determines that substantial progress or effort has been and continues to be made towards giving effect to the designation, or
- c) The designation specifies a different lapse period.

In accordance with section 184(1)(c) of the RMA, lapse periods of 15 years are required for the Project (except for NoR 4b which is an alteration to Designation 6717).

When considering an extended lapse period, it is appropriate to balance the need for that lapse period against the potential prejudicial or "blighting" effects. In the context of the Project, an extended lapse period is considered necessary for the following reasons:

- a) It provides the Requiring Authorities sufficient time to:
  - (i) Undertake the detailed design of the Projects;
  - (ii) Obtain the necessary resource consents;
  - (iii) Procure funding;
  - (iv) Undertake tendering / procurement; and
  - (v) Undertake property and access negotiations and other processes associated with the Project construction
- b) It provides property owners, businesses and the community certainty on where transport routes will be located (i.e. within the designation boundaries) and within what timeframe (the end lapse date).
- c) It supports efficient land use and transport integration by enabling the efficient delivery of transport infrastructure at a time and in a way that is integrated with planned intensification;

It is noted that:

- a) An extended lapse period does not mean that the designation will not be given effect to until the end of the lapse period sought. A lapse period is a limit and not a target.
- b) It is not uncommon for infrastructure projects to have a longer lapse period and this has been confirmed on recent projects such as the Drury Arterial Network (Auckland Transport), 2022 Southern Links (Waka Kotahi), 2015, the Northern Interceptor Wastewater Pipeline (Watercare), 2013 and the Hamilton Ring Road (Waikato District Council, Hamilton City Council).
- c) Setting an unrealistically short lapse period would not be a significant factor in facilitating earlier availability of funding than is planned at the time the NoRs are sought.

Generally, the effects of an extended lapse period include a lack of uncertainty as to:

- a) When construction will commence;
- b) How long an affected party will be subjected to construction effects and the degree to which they will be affected by those effects; and
- c) The form of the potential effects of the future operation of the Project.

In the absence of a specific construction commencement date, and other precise information regarding construction duration within any specific area, it is considered that the most workable method for managing any outstanding uncertainty associated with the lapse period being sought is

## 6 Design and assessment approach

This section sets out the approach to design, construction methodology and the existing and future environment.

## 6.1 Approach to design

As established, the proposed designations (NoRs 1 to 4a) and alteration to Designation 6717 (NoR 4b) sought by the NoRs will protect a BRT corridor with high quality walking and cycling facilities.

The design undertaken to date is at a level sufficient to inform the proposed designation boundaries and to assess an envelope of effects that includes operational and maintenance requirements, potential construction areas, and areas required to mitigate effects from the Project. It has been prepared for assessment purposes, and to indicate what the final design of the Project may look like.

The final alignment for the Project (including the design and location of associated works including bridges, culverts, stormwater management systems, soil disposal sites, signage, lighting, landscaping, realignment of access points to local roads, and maintenance facilities), will be refined and confirmed at the detailed design stage.

The detailed design will be undertaken before construction and an Outline Plan or Plans (as the Outline Plans may be staged to reflect Project phases or construction sequencing) will be submitted to Council as set out in s176A of the RMA.

The implementation timeframe for the Project is yet to be confirmed and is subject to funding. To enable an assessment of the potential effects of the Project on the environment, the assumed construction start date is 15 years away.

The drawing set contained in Volume 3 includes General Arrangement Plans for each NoR.

## 6.2 Construction methodology

### 6.2.1 General approach

An indicative construction methodology has been developed based on the level of design undertaken to date and the current land use / land form in which the corridor is located.

The construction of the Project will be undertaken within a Management Plan framework. The conditions for each of the proposed designations and altered existing designation will be in place to manage the effects of the construction activities. Should the contractors wish to undertake construction activities in a manner which is not within the scope of the proposed designations, or any future resource consents, additional authorisations will need to be obtained at that time.

Management Plans form an integral part of the construction methodology for the Project setting out how specific matters will be managed. A suite of Management Plans are proposed for the Project. These are discussed in Section 10 of this AEE and include the following:

- Construction Environmental Management Plan (CEMP);
- Construction Noise and Vibration Management Plan (CNVMP);
- Construction Traffic Management Plan (CTMP);

- Stakeholder and Communication Engagement Management Plan (SCEMP); and
- Network Utilities Management Plan (NUMP).

The management of any potential or actual effects arising from construction activities that relate to regional resource consenting matters will be provided for when these consents are sought, in the future.

The Management Plans and future Outline Plan(s) required for the proposed designations will be submitted to Auckland Council prior to the commencement of construction.

Following the Completion of Construction, the designation boundary will be reviewed and any land that is not required for the permanent work or for the on-going operation, maintenance or mitigation of the Project will be reinstated in coordination with directly affected landowners or occupiers.

### **6.2.2** Construction area requirements

Typical offsets for construction areas of various construction work have been adopted to inform the proposed designation boundaries. These offsets and typical construction areas have been based on similar transport infrastructure projects of this size and nature.

The table below provides guidance on the typical offsets and construction areas. These are intended to allow sufficient working areas to facilitate the construction of the Project and are indicative only. Final areas will be determined during detailed design and informed through the Outline Plan process.

Table 2: Typical construction work areas

| Construction Element                                                                          | Typical area or offset required for construction                                                                                    |
|-----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Earthworks - construction of batter slopes (urban environment, minimal earthworks cut/ fill)  | 2 m from earthworks batter slopes                                                                                                   |
| Earthworks - construction of batter slopes (rural environment, moderate earthworks cut/ fill) | 6 m from earthworks batter slopes for construction access and environmental controls                                                |
| Stormwater wetland                                                                            | 6 m around for access and environmental controls.                                                                                   |
| Construction access road                                                                      | Typically 4 m wide for smaller vehicles, utes, etc. No heavy vehicle access.                                                        |
| Bridge construction (substructures: abutments, piers)                                         | 20 m either side of the bridge, and minimum 40m behind each abutment ends for construction access, e.g. cranes, piling rigs, trucks |
| Bridge construction (Superstructure)                                                          | 20 m either side of bridge for typical crane access, truck access                                                                   |
| Retaining wall construction (minor/<br>small retaining walls e.g. timber or<br>blocks works)  | Typically, 6 m outside the wall in cut, 2 m for fill retaining walls                                                                |

| Retaining walls (large) e.g. secant pile wall, sheetpiles, mechanically stabilised earth | Typically, 15 m outside of wall in cut, 5 m behind wall for fill retaining walls                                                                                                                                    |
|------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main site compound                                                                       | 5,000 - 10,000 m <sup>2</sup> (depending on scale of the Project)                                                                                                                                                   |
| Construction areas                                                                       | 500 m² to 2,000 m² for satellite site compounds and construction yards. (located near critical work areas, e.g. bridge, retaining walls, culverts, major drainage works, major earthworks for site staff and crews) |
| Stream diversions, culverts and headwalls                                                | Typically 10 to 20 m beyond the extent of the permanent works for stream diversions, culverts, and larger headwall construction.                                                                                    |

### 6.2.3 General construction activities

This section contains a description of the following general construction activities across the Project including:

- Site establishment;
- Temporary traffic management;
- Construction yards and site compounds;
- Protection and/or relocation of existing network utilities;
- Bridge and structures works;
- Earthworks;
- Works in watercourses; and
- Pavement construction, streetscape and finishing works.

## 6.2.4 Enabling works, utility relocation and protection

The Project traverses a predominantly urban environment. As a result, there a several network utilities crossing the corridor. The key services within the NoRs include:

- Aviation fuel lines;
- · High voltage overhead and underground transmission lines; and
- A gas transmission line

Section 9.13 of the AEE sets out the assessment of effects of the Project on these network utilities.

Initial discussions have been undertaken with network utility operators. Works in relation to any network utility will be undertaken in accordance with any future agreements made with each network utility operator to ensure compliance with their methodologies, standards and requirements.

The exact scope of works for service relocation will be confirmed through site investigations and developed in consultation with the respective utility operators once detailed design of the Project is complete.

### 6.2.5 Site establishment

### 6.2.5.1 Construction areas

Construction areas include main site compounds and site laydown areas. The main site compound will be used as office facilities for project and administration staff. Typically, the main compound will be located in a strategic location with easy access from a nearby road or public transportation.

Where possible, the main site compound will utilise an existing site or building(s) that are within the proposed designation boundary due to being impacted by the Project. The use of the main site compound will only be required during the construction period and the site will be reinstated upon completion of the works.

Construction areas are located along the corridor near works sites for example, major earthworks, bridges and culvert sites. These areas are relatively flexible and can evolve as the construction progresses. Several areas within the designation boundary have been identified as indicative construction areas. These areas are set out in Volume 3 and summarised in the table below:

| Construction area | NoR            | Plan reference                                 |
|-------------------|----------------|------------------------------------------------|
| 1                 | NoR 1          | General Arrangement Plan – NoR 1 Chainage 2620 |
| 2                 |                | General Arrangement Plan – NoR 1 Chainage 2780 |
| 3                 |                | General Arrangement Plan – NoR 1 Chainage 3250 |
| 4                 |                | General Arrangement Plan – NoR 1 Chainage 6420 |
| 5                 |                | General Arrangement Plan – NoR 1 Chainage 6880 |
| 6                 | NoR 2          | General Arrangement Plan – NoR 2 Chainage 2400 |
| 7                 |                | General Arrangement Plan – NoR 2 Chainage 400  |
| 8                 |                | General Arrangement Plan – NoR 2 Chainage 050  |
| 9                 |                | General Arrangement Plan – NoR 2 Chainage 320  |
| 10                | NoR 3          | General Arrangement Plan – NoR 3 Chainage 1200 |
| 11                |                | General Arrangement Plan – NoR 3 Chainage 1100 |
| 12                | NoRs 4a and 4b | General Arrangement Plan – NoR 4 Chainage 3200 |

#### 6.2.5.2 Site clearance and demolition

Site clearance to allow for construction activities across the Project may involve the removal of topsoil, fences, structures, trees, vegetation and other clearance works such as building demolition.

Vegetation removal will be carried out by a Suitably Qualified and Experienced Person and will be in accordance with relevant designation conditions. Traffic management will be required during the clearing of vegetation adjacent to live carriageways.

In some instances, site clearance includes the demolition of existing buildings or structures. Property demolition will be carried out by a Suitably Qualified and Experienced Person. The scope of demolition and accommodation works will be verified by the contractors once detailed design and construction planning progresses.

### 6.2.6 Traffic management and access

Construction of the Project will likely involve disruption to the surrounding existing road network and property accesses. Additional traffic will be generated from general staff and workforce for the Project as well as construction specific traffic such as traffic movements for material delivery and movement within construction areas.

The assessment and proposed temporary construction traffic management measures are discussed in Section 9.3.2 of this AEE and detailed in the Assessment of Transport Effects provided in Volume 4.

Generally, access along the existing Project corridor will largely be maintained, however, some closures will be needed for critical activities at night or on weekends.

Site Access Points will be required to access the nominated construction areas. Each construction area may require several access points to ensure adequate access and flexibility for the construction works. Access for construction vehicles, plant and materials will be via the designated Site Access Points.

The Site Access Points and temporary traffic management controls will be in accordance with the Waka Kotahi code of practice for temporary traffic management.

### 6.2.7 Bridge, culvert and stream works/works in watercourses

The bridge, culvert and stream works will be confirmed during detailed design and be undertaken in accordance with any specific conditions on the designation and the applicable resource consent conditions. Resource consents for bridge, culvert and related stream works will be sought as part of the future consenting stage.

Bridges over rail will require specific KiwiRail approval to work adjacent live overhead lines and rail lines. These works are required to be carried out during a block of line which are typically carried out during night-time, weekends, and public holidays. An extended block of line is typically available during the Christmas and New Years' period which the contractor may plan to carry out significant construction works to make use of the prolonged closure period. The planning and approval process will be managed through a Management Plan framework by the contractor closer to the time of construction and in consultation with KiwiRail.

### 6.2.8 Earthworks

Bulk earthworks will typically be undertaken during summer earthworks months and minor earthworks and pavement construction can be carried out all year round provided sediment runoff and environmental controls are managed accordingly. Resource consents for bulk earthworks will be

sought in the future at detailed design stage. Bulk earthworks will be required to accommodate road formation and contouring for the proposed stormwater wetlands.

Earthworks will typically include the following activities once enabling works have been undertaken:

- Topsoil stripping and removal of any unsuitable materials;
- Cut and/or fill to grade or formation, including conditioning and suitable compaction;
- Preparation and conditioning of the subgrade layer;
- Final trimming and topsoil placement; and
- · Landscaping and site reinstatement.

Within each of the construction areas an earthwork compound for handling, stockpiling some topsoil, loading and conditioning site won material will be established to enable better utilisation of the existing material. Where required, top soil stockpiles can also be utilised. The topsoil can be used as water diversion bunds for environmental control purposes. The remaining volume will need to be stockpiled in site laydown areas. Areas for these activities have been provided for within the proposed designation boundaries.

Suitable dust management measures will be considered for the Project and are anticipated to include:

- Water carts to minimise dust during earthworks;
- · Covered trucks hauling material onto and off site; and
- Mulching and top soiling of exposed earthworks.

Erosion and sediment control measures will be installed in the future, in accordance with any applicable resource consent conditions and the Auckland Council Erosion and Sediment Control Guidelines or subsequent amendments.

### 6.2.9 Indicative construction staging and programme

The specific staging of construction works will be dependent on the:

- Procurement;
- Land acquisition;
- Final detailed design of the Project;
- The construction duration, staging of the Project and targeted completion dates;
- Technological advancements of construction methods;
- Availability of contractors; and
- Availability of other resources (such as materials and construction equipment).

Based on a high level estimate of similar transport projects, the anticipated construction duration for each NoR is set out in Table 3 below. These durations are indicative and assume that each NoR will be constructed independently of each other. If the NoRs were to be constructed concurrently or sequentially, this may change these durations.

Table 3: Indicative construction duration for each NoR

| NoR   | Extent                              | Length | Estimated duration |
|-------|-------------------------------------|--------|--------------------|
| NoR 1 | Botany Town Centre to Rongomai Park | 4.3 km | 4 to 5 years       |

| NoR 2             | Rongomai Park to Puhinui Station, in the vicinity of Plunket Avenue. Including the widening of existing bridge over SH1.                    | 6.4 km | 4 to 6 years |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------|--------|--------------|
| NoR 3             | Puhinui Station, in the vicinity of<br>Plunket Avenue to SH20/20B<br>Interchange. Including the BRT bridge<br>connecting to Puhinui Station | 1.9 km | 3 to 4 years |
| NoRs 4a and<br>4b | SH20/20B Interchange to Orrs Road.<br>Including the ramp structure from<br>SH20B to SH20                                                    | 2.3 km | 3 to 4 years |

## 6.3 Approach to the assessment of effects

Section 171(1) of the RMA sets out the matters that must be considered by a territorial authority in making a recommendation on a NoR for a new designation. Under section 181(2), those same matters are to be considered "with all necessary modifications", in relation to a NoR for an alteration as if it were a NoR for a new designation. In the context of the Project, NoR 4b is for an alteration to an existing designation (Designation 6717) for NZ Transport Agency, NoRs 1 to 4a are new designations for Auckland Transport.

When assessing the actual or potential effects on the environment, the assessment has been limited to matters that trigger a District Plan consent pursuant to section 9(3) of the RMA.<sup>5</sup>

Where national (through any applicable National Environmental Standard) or Regional Plan consenting requirements are triggered, these will not be authorised by the proposed designations and alteration to existing designation and will require all necessary national and regional consents to be obtained in the future.

Based on the above, the assessment of effects that have been undertaken to support the Project is limited to the following matters:

- Transport;
- Arboriculture;
- Social;
- Property, land use and business;
- Urban design;
- Landscape;
- Flooding;
- Noise and vibration:
- Terrestrial ecology;
- Archaeology and built heritage; and
- Network utilities.

Te Tupu Ngātahi Supporting Growth

<sup>&</sup>lt;sup>5</sup> Section 176(1)(a) – If a designation is included in a district plan then section 9(3) does not apply to a public work or project or work undertaken by a requiring authority under the designation

## 6.4 Approach to stormwater management

Effects of stormwater quantity, quality and effects on streams is authorised under the Regional Plan and therefore will be considered as part of a future consenting process.

Notwithstanding this, provision is made for the future mitigation of potential stormwater effects (retention/detention and stormwater quality) within the proposed designation boundaries. This is based on a stormwater philosophy developed for the Project in partnership with Manawhenua.

This partnership has informed the Project Team's understanding of how development within the catchments that the Project corridor traverses has impacted Manawhenua, including people, traditional practices, and the environment. Key guidance from Manawhenua through wānanga included the following:

- Support for ki uta ki tai, catchment scale approach seeking opportunities for net catchment benefit;
- Preference for green infrastructure and nature-based solutions;
- Recognition that the Project traverses a predominantly urban environment which means there are many constraints, however, environmental enhancement should be prioritised;
- Multifunctional solutions are preferred as stormwater management inherently spans both environmental and social considerations;
- The stormwater management outcomes need to connect with and be integrated within other Project outcomes and opportunities; and
- Stormwater management solutions positioned in close proximity to stream receiving environments need to be developed in partnership with Manawhenua.

Considering the above, the stormwater philosophy for the Project is guided by the following principles:

- Te mauri o te wai the life-sustaining capacity of water is protected and enhanced;
- Ki uta ki tai provide net catchment benefit, recognising connected waterways from the mountains to the sea;
- Partnership Manawhenua are enabled as decision makers and kaitiaki, with inter-organisational collaboration enabling wider outcomes; and
- **Multi-benefit solutions for broader outcomes** include opportunities for stormwater management within landscaping requirements and community spaces.

In order to determine the type and location of stormwater management solutions (to inform the proposed designation boundaries), the following key technical considerations were identified in addition to current stormwater design guides, strategic guidance documents<sup>6</sup> and constraints along the Project corridor:

- Locating stormwater management solutions near low points along the corridor to maximise contributing catchment;
- Integrating stormwater management solutions with parks and public open spaces, where practicable;
- Considering the proximity of potential stormwater management solutions to high contaminant generating areas; and
- Locating stormwater management solutions outside of flood plains where practicable.

<sup>&</sup>lt;sup>6</sup> Hīkina te Wero – Auckland Transport's Environmental Action Plan, Toitū Te Taiao – Waka Kotahi's Sustainability Action Plan

Partnership with Manawhenua Maintain existing treatment provided for existing impervious surfaces Seek opportunity to treat existing paved surfaces that are not currently treated, including where existing runoff mixes Re-use, repurpose and enhance existing infrastructure, including devices outside the Project corrido Provide treatment for new impervious surfaces using nature-based solutions Minimise standing water in green infrastructure to manage bird strike issues, given Airport proximity Enhance and green the Project corridor Freat all higher loading areas, includi intersections, stations, bus turning bays, and BRT stops Recognise the broader benefits of landscaping and street trees

The summary of the stormwater management approach is set out in Figure 10 below.

Figure 10: Overview of stormwater management approach

It is noted that this approach sets out the overarching stormwater management philosophy and rationale for proposed stormwater management treatment along the Project corridor in the context of relevant stormwater related statutory requirements. This approach will be further developed through future consenting and the detailed design process.

## 7 Existing environment

It is well established that the "environment" is the existing environment as well as elements of the future environment such as permitted activities under the relevant plans and resource consents that have or are likely to be implemented. In addition, it is acknowledged that the future environment requires consideration of that environment as signalled by operative objectives and policies of a District Plan.

Sections 7.1 – 7.4 sets out the existing environment for the Project as at the date of lodgement.

While the environment is predominantly urban, consideration of the environment as it exists today will not be a true reflection of the environment in which the corridor will operate. As a result, Section 7.5 sets out the likely future receiving environment for the Project.

## 7.1 NoR 1 – Botany Town Centre to Rongomai Park

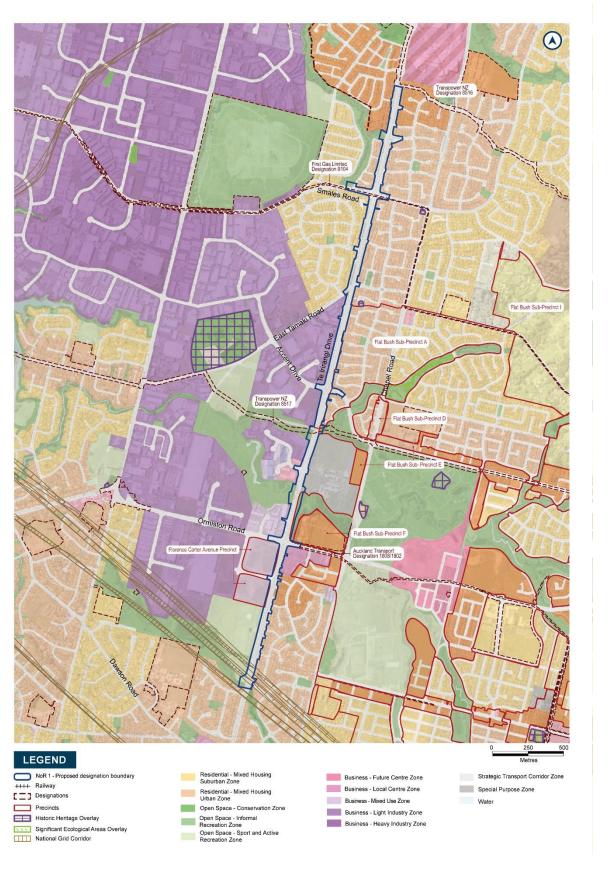

Figure 11: Key features - NoR 1

| Features                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Current land use                  | The land use along Te Irirangi Drive is primarily residential with some commercial, educational, and retirement facilities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                                   | Rongomai Park is zoned for both sports and active recreation and informal recreation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
