		I
	Articulation and use of materiality, needs to achieve a greater level of overall cohesiveness with the architectural language and materiality strategy for the building as a whole. The materiality of upper levels bears no or little relationship to the lower levels addressing Dominion Road and this is not supporting the ability to achieve a building stepping up to this height.	As per response to heritage feedback, revised façade design for Dominion Road building consolidated the grain in terms of number of modules and elements which is resulting in this, there is a conscious decision to differentiate the setback upper 4th and 5th level of materiality that relates more to the Valley and Carrick Road buildings in behind, as per dispecialist.
	Provide the panel with aerial oblique views from above each corner of the site, taken to include the immediate context of adjoining buildings and street frontage / corners, to inform an understanding of how the building massing, architecture and boundary interface conditions relate to both the public realm and adjoining properties.	4 oblique drawings added to drawing set.
	Site sections that depict heights relative to the AUP 11+2m heights and relevant height in relation to boundary controls, and shading studies, as provided in the pack for Panel 1, should continue to be provided and updated as the scheme evolves.	Addressed, with sections included and shadow studies updated for drawing package 02/
	Undertake a more in depth context analysis - including but not limited to: streetscape, the entrances, the building fabric, what are the aspects of the character buildings and what could they lend to the proposal, the grain and rhythm of shop fronts, fascia heights, building forms etc.	Design direciton on these matters has been taken from the appointed heritage specialist heritage specialist An evaluation against these matters can be undertaken as part of the urban design asses
11-Apr	Address the New Zealand Urban Design Protcol's 7c's of design quality	would frame out such assessment against the more specific urban design related provision AUP.
11-Apr	Recommend the proposal should aspire for a higher Homestar standard (7+)	Noted.
11-Apr	The design response/strategy needs to be developed further in more depth, particularly in relation to identified sensitive receptors (streetscape interface, internal courtyard, heritage buildings, adjacent residential buildings etc). Courtyard design requires further design consideration to work. This feels more of a movement orientated space and	Noted - further to the overall site layout and building core and typology changes, the pro- development of integrated archtiecture and landscape design has developed areas of for the central courtyard, and the Carrick Place / eastern boundary interface, to ensure the p design responses to each of these important receptors / parts of the scheme.
11-Apr	designed as left over space rather than an integral element in the design.	Addressed as part of landscape concept development drawings now completed in working
	Consideration of dual aspect typologies and multi cores is needed and has true benefits. However if done, this will make blocks narrower and potentially affect yield.	As per item 4 above, Addressed with design changes since UDP1 have adopted a multi-co Road building and Valley Road building, which is now split into two separate buildings ab
11-Apr	Further consideration of block numbers to yield to site layout to separation to height may be required. A balance will be needed.	The revised design has altered the balance of these factors.
11-Apr	The entry at Carrick Place requires more work as described by the Panel.	As per UD item 1, interface with Carrick Place remains under design review, with a revise matters anticipated to form part of UDP2 package.
11-Apr		As per UD item 10.
	Building separation for internal amenity could be increased slightly more, potentially by 2m or more if the building is slimmed down or realigned using the easement area	The revised building separation and multi-core changes to building layout and and develor concepts for the courtyard have addressed the internal site amenity matters.
11-Apr	Building dominance would be felt in the central area of the courtyard and would need to be alleviated.	Evaluation of 3D model of revised massing and architectural development alongside land there is not a dominance issue to be alleviated central to the courtyard.
	Communal space requires strong consideration of interface/buffers and set backs to ground floor residential. The 3m sets backs may not be sufficient and level changes may be required.	These matters have been addressed as part of the revised layout and landscape concept
	UD are not supportive of the narrow single entrance on the left hand side of Dominion Road frontage. Specifically CPTED, design appearance and functionality concerns make this unacceptable.	This entrance is under design revision, as part of addressing the universal access issus rai
11-Apr	UD are not generally supportive of long corridors and not having external connection/daylight via glazing. Service areas for retail units are not provided – given both internal and public street parking/loading/waste constraints, not	These matters have been addressed as part of the adopted mult-core strategy and split o
	providing a service access area or movement space to the rear of retail units appears short sighted, specifically on Dominion Valley Road.	Noted.
11-Apr	Basement design – concerns with waste areas, size, travel distance, waste collection being non-functional.	Noted.
11-Apr	Storage lockers – concerns with access behind parked cars.	Noted.
11-Apr	Sufficient space is required between bike parks and car parks.	Noted.
11-Apr	The design at present doesn't lend itself to breaching height restrictions and needs further consideration/tailoring	This has been addressed through the further design development.
		Addressed through further design development and drawing documentation to understa
11-Apr	Concerns with increased 5 storey height, specifically in closer relation to residential properties (north and east)	conditions proposed. Revised massing and architectural treatment has addressed the relatinship of 5 storey el-

-	Concerns with increased 5 storey height, in relation to the impact on courtyard sunlight/shade.	Sun/shade studies are provided.
	In relation to Valley Road building UD disagree with panels comments that "the direction that this building is going in as a	Noted and that since LIDD1 there have been t further shanges to beight and massing in a
	massed form up to five storeys in height above car parking level". At present, the Council UD considers this requires stronger refinement.	Noted, and that since UDP1 there have been t further changes to height and massing in e frontage through to Carrick Place including reduction to 3 storeys at Valley Road.
ш-дрі		
	There are concerns with 5 storey height of the Valley Road building and its closer relationship to the eastern residential	
11-Apr	properties from an urban design perspective – both shading and massing leading to potential dominance.	As per item 42.
	There is strong concern with overlooking from open balconies to the northern retirement village. Building height, proximity	
11-Apr	and deck design needs further consideration.	These have been reduced and louvres added to address overlooking from the balconies.
	We strongly suggest that detailed bulk and massing studies are needed, and are not convinced by current designs to alleviate	Differentiated responses to the different context have been developed and continue to h
		set now produced to aid understanding.
-	Any future design statement should provide an analysis and explain breakdown of form, and façade strategy – We are	
	currently not convinced the Valley Road building is successful on its long sides.	Noted.
		All sides of building mass to this side of site are addressed, with differentiated responses
	this order.	design proposals.
-	Agree with Panel and Heritage specialist on closer scrutiny of design details on heights and relation to adjacent character	
	buildings.	Noted
	The pedestrian and car park entries both relate poorly to the street and lack legibility.	All entries have been revised to address these matters.
p.		
11-Apr	The pedestrian and car park entries are under-articulated and non-legible – a clearer presence and legibility is recommended.	As per 52 above.
		As per heritage feedback on this issue, this feedback has informed further refinement of
		massing and façade design, with a greater vertical emphasis and alignment between grou
	The vehicle entrance appears as a gap site and service space, allowing views straight up to the 5 storeys, including blank walls	elements, as well as structure to ground that treats the parking entrance with the same ${\mathfrak g}$

Core design – agree with Panels advice on flipping the building design but this needs to ensure a glazed element of sorts with outlook is kept to the street. It is questioned how useable/functional the balconies on frontage are and currently appear constrained. If provided, it is recommended that they are designed to be functional spaces. In terms of the facade strategy, it is agreed that some horizontal emphasis could be positive however this needs to be carefully balanced. Too much of a horizontal emphasis has the potential to make any building appear squat and heavy, creating adverse bulk and dominance effects.	Noted Noted Noted, to be worked through with refined design development of entry. As per UD feedback issue 15 As per response to Heritage issue 10, this option was tested post-UDP1 but was found to negatively impacted the courtyard space and outlook for units facing the courtyard. The with the other façade changes is considered sufficient to improve the overall compositio Balcony design has been refined through the further development of facades. Façade strategy and design development has developed a more considered grain with cle horizontal.
11-Apr 11-Apr 11-Apr 11-Apr 11-Apr 11-Apr 11-Apr 11-Apr 11-Apr 11-Apr 11-Apr	recessed. It is considered positive how the pedestrian entry reads as a break but could be more subtle visually with synergy to other parts of the building design. Surveillance through clear glazing of the street frontage is recommended from the core A canopy at the entrance is recommended. The Dominion Road façade strategy is very busy and lacks synergy. Core design – agree with Panels advice on flipping the building design but this needs to ensure a glazed element of sorts with outlook is kept to the street. It is questioned how useable/functional the balconies on frontage are and currently appear constrained. If provided, it is recommended that they are designed to be functional spaces. In terms of the facade strategy, it is agreed that some horizontal emphasis could be positive however this needs to be carefully balanced. Too much of a horizontal emphasis has the potential to make any building appear squat and heavy, creating adverse bulk and dominance effects. Street elevations shown in situ – this would provide a better understanding of the relationship to existing buildings.	Noted Noted Noted, to be worked through with refined design development of entry. As per UD feedback issue 15 As per response to Heritage issue 10, this option was tested post-UDP1 but was found to negatively impacted the courtyard space and outlook for units facing the courtyard. The with the other façade changes is considered sufficient to improve the overall compositio Balcony design has been refined through the further development of facades. n clear vertical emphasis over

e landscape concept that provides a and enjoy this space.

	A key consideration will be ensuring that planting can be established within the courtyard space and to the boundary of the site with the Carrick Place retirement units above the proposed podium level. This will require technical expertise in terms of structural, arboricultural, servicing (water supply) and landscape design input (as well as other matters).	This has been addressed through the advancement of the landscape concept and plantin
	There appears to be the potential for potential visual dominance and privacy effects to arise on the neighbouring retirement units on Carrick Place, given proximity of building bulk.	Response as per UD issues 42 and 59
	The opportunity to 'front' Carrick Place through the development with activity and well-designed landscape / building	Noted, interface with Carrick Place remains under design review, with a revised proposal anticipated to form part of UDP2 package.
	The three public street sides/external elevations of the buildings (Dominion Road, Valley Road, East/Carrick Place) are	
9-Jul	pushing above what was originally granted consent.	Noted.
	The Dominion Road height, bulk and massing at a basic level is still of fundamental concern, specifically how these design aspects are addressed at a fundamental level, before we address architectural detailing. This is coupled with the fact that the 5th floor appears visually heavy compared with the rest of the building/s (noting it has been pushed back). Is the overall 5 storeys and 4 storeys street front height and bulk appropriate? How could this be resolved further. Then secondarily, could these have architectural treatment to address this further.	N/A - established later in minutes that it comes down to treatment.
	design and loss of the strong retail bay elements adds to this bulky mass appearance. Further consideration of breaking this	The Valley road building redesign was in response to questions raised on providing a mor which was more in line with other character buildings in Mt Eden. The proportioning of t derived by interpreting the design characteristics of some of Mt Eden's larger buildings w easternmost module has reduced in size to reduce the appearance of bulk.
9-Jul	buildings at a taller height. The top floor form and architectural appearance to address bulk and mass is recommended to be refined further. Need to look closely at what the effects (visual dominance, shading and overlooking) will be on the adjacent properties (north and east).	The fifth floor floorplate has been reduced and is stepped from the northern and western cladding treatment from brick to grey vertical metal cladding panels for the top floor pen extent of overhang of the rooftop treatment to the upper floor, that further contributes perception of mass at the top of the building.
		Following this meeting, amendments were made to the 5th floor to decreasing the perce as well as mitigating privacy effects. This is further described in the UDLVA and AEE.
	Architectural detailing will add an additional layer to how the bulk and massing could be broken down, but the first step is to	as well as finitigating privacy effects. This is further described in the ODLVA and ALL.
9-Jul	resolve the fundamental height, bulk and massing.	As per point 75.
		Flipping the entrance and the core with Retail Unit 2 around – would bring the entrance t Retail Units 1 and 2, but would still be a stepped entrance. This is not apparent on the pla to be located at the northern edge of the site preventing centralised access, architectura
9-Jul	It was also queried whether the placement of Valley/Carrick building cores and the benefits of their visibility on the eastern elevation has been considered (form and appearance)?	The travel distance for residents accessing the Valley/Carrick cores in a more eastern loca façade benefits of such did not outweigh the disbenefits to residents amenity in their opi
9-Jul	Andrew noted the AUDP considered designing through-units/ dual aspect units should be explored, potentially resulting in a significant change in building design. However the original building form is retained, but with some through-units provided – does this address the Panel concerns sufficiently? The top floor appears heavy. Could be the dark/ recessive black colour. • Further discussion on fundamental principles did not take place from an urban design perspective.	The panel was satisfied in this regard, provided the internal bedrooms were able to be ac This has been lightened and is evident in the updated visual simulations prepared by Boff appearance.
	Requested confirmation that the 5th storey would not be visible from directly opposite the building on Dominion Road.	
		See drawing RC-050. This has considered to have been resolved through design development following this me
	(Dominion Road)	discussed within the UDLVA
9-Jul	The entrance and visible break will play an important role in shaping the bulk and massing along this key frontage. (See below accessibility discussion under site layout) (Dominion Road)	Noted.
	Andrew queried the design concept of bringing all the pillars on the facade to ground in the same material of the above façade. (Dominion Road)	Noted.
		This is considered to be achieved per the discussion in the UDLVA. Care has been taken to provides a cohesive family of buildings that are differentiated from each other. This is acl including the proposed variation in brick colours and finishes, and use of detailing such as courses above windows and balconies and frieze details to the tops of buildings, and win details to some of the suspended canopies
	Andrew advised such a continual canopy approach would need to be designed very carefully to avoid it becoming dominant feature. Overall a unified but individual unit canopy approach may be more appropriate. Again, avoid make this too busy with treatment, a cohesive language on this design element is needed (Dominion Road)	See comment above.

·

9-Jul	The view of the Dominion Road building from the corner and the Valley/Carrick building east elevation with a dark top floor is very noticeable and does not appear recessive	As per above comment. The treatment of the Dominion Road building top has been sligh appearance.
9-Jul		Consideration has been given to the Dominion Road height and massing. This considered further design development.
9-Jul	Carrick Road pedestrian entry legibility could be enhanced.	The footpath has been widened to 1.5m.
9-Jul	Although a unified appearance but individual canopy approach may be more appropriate, please ensure that weather protection is still considered so that it is a practical outcome and gaps are considered.	The canopies will provide sufficient weather protection.
9-Jul	A closer attention to detail on the north elevation of Carrick Building is needed give the close range views of audience.	Noted and revised for meeting on 12 August.
9-Jul	A facade composition which creates more defined smaller elements within the overall form, slighting greater vertical emphasis and a lighter 'feel' to the top is recommended to be explored.	The top has been refined as per item 77.
31-Jul	the Panel has reservations about the universal access strategy and the dignity of users via an internalized 'service entrance'. Due to the Dominion Road building having two cores, there is an opportunity for them to be separated further and the northern core to move north (with minimal replanning of apartment layouts and corridors at upper levels). This would provide an equitable and generous entrance for universal access and can still be connected internally to the more southern entry, which would remain on axis to the Carrick Block core beyond. This change would also improve and increase the street activation and may result in better-proportioned ground-floor retail to Dominion Road that is more viable.	The fall north to south along the street frontage makes achieving step-free access challe and southern portions of the street frontage that most legibly and logically support a prin function not just for the Dominion Road building itself but for the development as a who access through to the central courtyard which links all the buildings and common spaces To mitigate the lack of universal access to the principal lobby entrance to Dominion Road conditions for an inviting secondary entrance at the far northern end of the street fronta street is able to be established. This linkage, which measures 3.5m in width, while smalle sufficiently generous in volume to be an inviting secondary entry, that can provide access prams and bicycles for example. It is anticipated it will provide a useful point of coming a heading north along Dominion Road, such that it will be well used and together with high integration with the adjacent bike store will ensure it will not feel like a second-class rout
31-Jul	The Panel is generally supportive of the proposed landscape strategy and the creation of a series of distinct character areas; however: The Panel has concerns about the interface of the communal courtyard with the ground-floor single-aspect apartments adjacent. The Panel is not convinced that planting as shown is adequate to delineate public and 'private' space, and ensure positive residential amenity, including privacy in relation to the communal activities. The apartments are very deep in plan, and adequate daylighting is yet to be tested. High planting and / or screening / curtains to mitigate privacy issues could negatively impact daylight penetration to the point of non-compliance. The Panel strongly encourages the applicant to consider a level change (preferable) or greater distance and stronger delineation between private spaces and the paths. It may be that the Western path of the courtyard could also be omitted.	It is considered an appropriate balanace has been achieved. To achieve greater privacy a depth to the planting to the western frontage, plus added a 1.2m high fin fence and gate the hedging. This has been reflected within the landscape drawings.
31-Jul	The Panel has concerns over the two-bedroom typologies type 2A & similar, and type 2K, due to the poor amenity provided to the second bedroom. This could be improved with a reduction in unit numbers, and/or some reconfiguration/replanning to provide a wider typology with better proportioned and spatially arranged bedrooms	Type 2A with the offset bedroom is a layout that the developer has built in numerous pr been recieved well by the market. The Type 2K units have been removed In the Dominio 2K (1 bed + multi) units were replaced with 2 x 2 full bedroom apartments thus reducing per floor. The one remaining 2k was revised to a type 1D, which sees the second bedroot bedroom.
31-Jul	The Panel considers that Apartment type 1A & 1B should not be referred to as being a two-bedroom apartment. The panel considers that every habitable room should have a window in an external wall and that daylight and air should not be borrowed from other rooms. Nevertheless, if the applicant persists with them as "office/adaptable spaces" they would benefit from a swapping of the bathroom and the office space location, to enable more long-term adaptability of the floor plate and minimizing relocation of services to make changes	These are referred to as multi-use rooms and this has been reflected within the plans. Th
31-Jul	Apartment type 3B would benefit from being handed like Apartment 3A so the deck and living is in a north-western corner, also with louvres to the balcony to provide privacy / minimise overlooking to the north.	This was reviewed and felt that the effect on the courtyard of separating the balconies re low height.
31-Jul	The Western elevation[of the Valley Building] could be further improved by reconsideration of its articulation and how it turns the corner to reduce the appearance of the otherwise large blank wall - in particular from the high-profile vantage point of the Dominion Road / Valley Road corner.	This has been addressed through providing a feature consistent in scale with the chamferelevation.
31-Jul	Dominion Road Building.	We investigated options of changing eth brick colour, but upon doing renders felt that the many variations of brick tones to this area and felt the additional colour was a diminisher
31-Jul	The Panel suggests the height of the canopy could be lowered to better match the canopy in the pediment of the adjacent character buildings, noting that this may also benefit the size of the clerestory windows over and daylight access (visible sky) into these south-facing tenancies	The canopy has been lowered in the latest drawings

	The Panel supports the extension of the block to the Eastern boundary, and the framing of a vehicle entry. Although this is an	
	improvement from the previous arrangement its success will be dependent on the quality of the materiality, finishes of the	
31-Jul	soffit and sidewalls, and the hiding of all services.	Noted - it is our intention to maintain the quality here as it is a very public visual interface
	The Panel supports use of brick and the general approach taken in material selection and detailing, which is a key component	
31-Jul	to the project's success in response to heritage.	Noted.

ace to the complex.

ate Raised	Issue Raised - Heritage	Comments
	The demolition of the character-supporting "Universal Buildings" remains a concern. Its loss will cause adverse effects that can only be adequately mitigated by a high-quality replacement design that is sympathetic to character values.	Noted. Ongoing design development is underway to ensure high-quality replacement des taking on board feedback and directon from Council's heritage specialist.
11-Apr	The Western Elevation on Sheet RC-301 is misleading, as it does not show the full length of the Valley Road Building behind the existing character-defining buildings at the corner of Dominion/Valley Roads. This should be amended to be a more like-for-like comparison (add in the proposed building behind, or remove the background hatching).	Noted
· ·	The Dominion Road building has 8 modules where the previous consented development had 6. Combined with the building being taller, the proportion and grain is not reading correctly.	Addressed - the modules and resultant grain of Dominion Road street façade has been re experts from Council and applicant team.
•	The Dominion Road building has too many elements, leading to a fussy appearance	Revised façade design for Dominion Road building since UDP1 has simplified and consolic of modules and elements, in response to feedback.
11-Apr	The Dominion Road street frontage needs to be simplified and reduced in height (especially at the southern end).	Revised building design for Dominion Road building has simplified street-facing façade de The height and massing has also been revised since UDP1, with southern end droppped 1
11-Apr	The Dominion Road Building should be reduced to 4 storeys. If a 5 <sup>th</sup> storey is to be considered, it will need to only be on the northern half of the site, and will need to be well set back from the main street frontage and appear recessive and architecturally "light".	As above, massing changes to Dominion Road building have retained a 5th storey but wit architectural development to further reduce the visible presence and prominence of this
11-Apr	If 5-storeys is to be provided on Dominion Road, this will need to be carefully studied from a range of viewpoints to ensure visual dominance over and competition with the existing character buildings is avoided	As part of the massing studies and design changes undertaken since UDP1, key viewpoint the north and at mid points along the subject site frontage, have been used to evaluate the relationship of the new buildings to the existing character buildings seen and experienced
11-Apr	The large (wide and tall) recessed glazed entry on Dominion Road does not relate well to special character. The passing public would still get glimpse views to the garden through a glazed ground floor lobby, even without a large full-height atrium	Design amended since UDP1 to address this feedback, with narrower, more recessive apa residential in character as well as responsive to the special character.
11-Apr	Moving the lift core closer to the garden, rather than its current position close to the street, might also improve the composition of the Dominion Road frontage.	This option was tested post-UDP1 but was found to have knock-on consequences that ne space and outlook for units facing the courtyard. The revised lobby design in combination considered sufficient to improve the overall composition.
11-Apr	If balconies are to be used on Dominion Road, we suggest that these are framed within a solid wall, rather than projecting out – projecting balconies are not found on the predominant historic building type in this area.	Addressed and this suggested strategy adopted as part of further development of façade.
11-Apr	This building should be reduced in height at the southern end (closest to Valley Road) to better fit with the special character values of the area. The current architectural composition of 3+2 storeys could lend itself well to dropping down to 3 storeys in the southern-most bay	Revised design has reduced southern end to 3 levels.
4-Jun	Design moves to split the cores within the Dominion Road building and make the apartment entry smaller scaled is positive.	Noted. This has been a key design change in response to UDP1 feedback.
4-Jun	Further work is required to make the top levels of the Dominion Road building appear even more recessive. The wide overhangs are not working successfully, and draw unnecessary attention to the upper levels.	Design amended to address this feedback, with wide overhangs and extent of shelter abore minimise the presence of upper floor in street views from the northern and southern end Dominion Road.
	It is recommended that the decks should be uncovered to reduce the building mass at upper levels (4 and 5) of the Dominion Road building.	As per item 14 above.
	At the northern end of the Dominion Road building, the design may need to reconfigure the plan and the location of the decks to push the end wall further south.	As per item 14 above.
4-Jun	At southern end of the Dominion Road building, the design may need to reduce the footprint of Level 3 and 4 and/or perhaps wrap the brick base language around so the 4th storey appears smaller in scale	Addressed, as worked through in subsequent meeting with Council's heritage specialist.
4-Jun	Longer distance views from both ends will be important to understand the success or otherwise of the proposal.	Noted
4-Jun	If Level 5 of the Dominion Road building is to be acceptable, there will need to be a clear visual relationship between Dominion Rd and Valley Rd buildings, with the height of the development appearing to be centralised on the site.	This feedback has informed the further testing and development of massing changes and materiality, to ensure the set back upper 4th and 5th floor levels of the Dominion Road b the site and not "coming forward" to the Dominion Road principal street facade.
4-Jun	Street wall: Composition and grain is considered to be improved, however the northern end of the Dominion Road building (4 storey element) needs to be further broken down into two sub-blocks as it is now appears too monolithic.	Addressed in subsequent further design development, following meeting with heritage exissue.
	It is important for the Dominion Road entry to remain somewhat recessed in order for the break in the street wall to remain legible.	Noted, a narrower recessed entrance is being retained as part of the revised design propo

oposals.

	The success of the scheme depends on utilising the extra couple of metres at the front of the site, if these extra metres are not used, then the top levels will need to be set even further back in order to have the correct appearance.	Given the status of the AT road widening designation, the proposal cannot at this stage so site's street frontage. Design and all drawings are being revised to consistently show the l designation line, which will provide a clearer basis to evaluate how the proposal relates t and the streetscape.
4-Jun	Splitting the Valley Road building in two, with more dual aspect apartments, is positive.	Noted
	A 3 storey form facing and interacting with the street is positive, and 'wraps' the character around the corner. It will be important that this does not appear too horizontal, and does not appear as a building sitting on top of a single storey base. It must meet the ground, and like on Dominion Rd, must have an appropriate grain	This feedback has informed further refinement of the 3 storey Valley Road building massi greater vertical emphasis and alignment between ground floor and upper level façade ele ground that treats the parking entrance with the same grain and framing strucutre as if it
	The driveway opening should appear like a vacant shopfront that you drive through.	Adopted in revised design proposal, as noted in item 24 above.
	For the Valley Road frontage, the art deco inspiration is fine, but not essential, and should not come at the expense of good	Further development of the façade strategy has gone away from the Art Deco inspiration
	overall composition. The end walls of the Valley Road 3 storey element must not be blank. Patterned brickwork, mural artwork, etc should be	composition as per the feedback. The end wall architecture has been revised further to avoid a blank monolithic wall. Brick
	considered.	to this wall in materials sympathetic to the special character.
	Extra viewpoints would be helpful – particularly longer distance views looking up and down Dominion Road will be essential to determining whether the 5th storey on the Dominion Road building can be supported or not from a special character perspective. The changes to reduce massing at the southern end appear positive, but again will need to be checked with the viewpoints	An additional view has been added within the visual simulations.
	Relationship with adjacent building is generally successful in terms of the overall mass to the streetscape (subject to longer	
	distance viewpoints). Architectural treatment is key to the ultimate success of this building, and still needs work (see details below).	Noted.
	The architectural treatment of the Dominion Road façade requires attention to resolve heaviness. Currently looks very grey and boxy, and has been oversimplified to a point that it appears too generic	The materiality and colouring has been refined. Brick is the primary façade material with buff tones. The Dominion Road elevation includes a two storey red brick element and a f façade element, both drawing on the traditional façade materiality of character buildings Road component buildings also incorporate contemporary cornice and brick detailing to a that reflects historical detailing in a more contemporary way.
	Dominion Road is colourful and interesting with a lot of detail, and the design needs to do more to bring more life to the building/s. For example: o Need to work with more colour. Red brick is favourable and an easy move to liven up the façade. o Suggest some form of cornicing at the top to add visual interest, help break up skyline, and frame elements. o Add richness and texture through ornament. Look at examples of techniques used on surrounding heritage buildings. For example header bricks on lintels, intermediate cornicing/banding, pilasters, decorative brick patterning, etc. o This does not need to mimic traditional elements precisely, but picking up cues from the character and using these in a modern way.	The Dominion Road buildings including contrasting vertical brick courses above windows the tops of buildings, and window joinery and traditional stay details to some of the suspen nods to the historic architectural vernacular. Further, the brick material palette used alor brick colours and finishes creates innate human scale, depth and richness to the facades, visual interest viewed up close within the streetscape, in ways that are appropriate to the variety whilst also achieving cohesion.
	The northwestern corner needs attention. Suggest wrapping the fenestration and architectural treatment from Dominion Road around to the side to alleviate the hard view against a blank wall from the north.	Texture has been added through carrying the brick courses around to the north.
	Random window arrangement on the northernmost module is not successful. This undermines the overall approach to composition. Dominion Road has a strong character, and the whole of the Dominion Road should have a correspondingly strong character response. Valley Road is a more appropriate place to have a slightly different character/ identity.	The window arrangements have been resolved. A more ordered pattern of windows has response to character.
9-101	Consider using verandah ties to add some texture and create visual interest. It will be important that each 'module' retains its own canopy, but some or all of them could use this traditional detail	Verandah ties have been added.
	Four main 'modules' is working well in relation to the historic grain of Dominion Road.	Noted.
	Will need to consider how the main entry appears to pedestrians approaching from both directions. The entry strategy will need to be complementary to the overall grain of the building, and not detract from the composition that has been achieved in relation to heritage.	The principal lobby entry itself is considered well handled, with the combination of a well recess and protruding canopy creating a legible and logical principal walk-up entrance to
	Signage should be considered now as part of the overall development so that there is an integrated/cohesive approach. The entry sign may be able to assist with the definition/legibility of the main entry point(s). Now is also the time to consider placement and design of other signage types (retail, wayfinding, etc.)	Signage has been included. See architectural drawings.
9-Jul	Consider a more interesting 'top' to the Valley Road & Carrick Road buildings. This might help alleviate the appearance of these being too bulky.	The top level of the Valley building has been refined through a treatment of vertical profi roof form, which includes an elegant bullnose corner. The top level of the Carrick Building metal cladding panels and a minimal extent of roof overhang to reduce perceived bulking

	In general, the massing of the 3-storey building on Valley Road works well. The corner view appears positive overall in	
9-Jul	relation to the heritage buildings on the corner, and visually 'completes' the block.	Noted.
	Valley Road façade looks too heavy and reads too horizontal. This could be broken up with some variety in	
	treatment/colour. Changing the proportions of the breaks from horizontal to vertical could help to make the façade feel	
	more elegant. One further option could be to have some variety in parapet height (e.g. middle section slightly taller), so it	The easternmost module has reduced in size to reduce the appearance of bulk. Further, th
9-Jul	does not appear so monolithic.	increased parapet height to reduce the horizontalness.
	Valley Road building does not need to replicate the Dominion Road building – can be more modern but complementary, and	
9-Jul	can have its own identity	Noted and considered provided.
	Residential scaled fence and planting seems more appropriate in response to Special Character Residential than previous

	The set back of the fifth level on the Valley Road building also appears to assist with mitigating adverse effects of	
9-Jul	when viewed from the Valley Road viewpoint (east of the site).	Noted.
9-111	The Carrick Place and Valley Road buildings are located closer to the site's eastern boundary than the consented buildings and the fifth level of these buildings (combined) is appearing to be visually dominant when viewed from Carrick Place (north of the site). There is likely to be the potential for these adverse effects to be experienced by people within private properties on Carrick Place.	The fifth floor floorplate has been reduced and is stepped from the northern different cladding treatment from brick to grey vertical metal cladding panels and the minimal extent of overhang of the rooftop treatment to the upper flor reducing the mass and perception of mass at the top of the building. With reg the top floor treatment of vertical profile metal cladding to façade and roof for corner, assists with reducing the apparent bulk at this upper level.
	Suggest that the applicant should explore alternative design responses for these fifth levels of the Carrick and
