Dear Douglas

I have received a request from my development engineer for some clarification on the flooding effects of the application. There appears to be discrepancies in the application material regarding the flood levels and floor levels. Can this clarification request please be directed to your engineers for comment?

1. Please see the attached document, the specialist has annotated the application flood report with a couple questions and clarifications.
2. Please provide clarification regarding the 1% AEP outputs and recommended levels from a catchment perspective.

Kind regards

Ben Cunningham | Senior Planner

Hi Team,

Yasenko has highlighted some areas which would benefit from some clarifications.

Can we please also request that the applicant provide some clarifications regarding their 1% AEP outputs and recommended levels from a catchment perspective?

Kind Regards | Ngā mihi,

Kuanjin (Jin) Lee | Development Engineer

Hi Jin

In general the report is based on appropriate boundary conditions.

The attached document contains annotations from me seeking a few clarifications around 1% AEP outputs and recommended floor levels from a catchment perspective.

Also I see no need in HW representative participating the hearings.

If you have further queries please let me know.

Kind Regards / Ngā mihi na
