Re:	Ministry of Education – Orewa North-West Primary School, Sunnyheights Road, Orewa Civil Engineering Design Memo		

1 Introduction

CKL has been engaged by the Ministry of Education (MoE) to undertake the civil engineering design for providing services and access up to the boundary of the proposed Orewa North-West Primary School located at Sunnyheights Road, Orewa (the site).

This site is located on a 2.893 ha portion of land within the Halls Farm residential subdivision being developed by Orewa Developments Ltd (ODL) at 264 West Hoe Heights. Resource and subdivision consent for the underlying Halls Farm residential subdivision was obtained by ODL in 2015 and two stages of that development have recently been completed. The MoE have acquired the subject portion of land from ODL to develop a primary school and are to seek the necessary approvals for the proposal for the change from residential to school use.

The purpose of this memo is to provide further information with respect to the connection of services and access to the proposed Orewa North-West Primary School. It should be noted that as the design and construction of infrastructure within the site are being competed by others, these works have been excluded from this report.

2 Earthworks and Sediment & Erosion Control

2.1 Earthworks

The earthworks for the subject site will be designed and completed by others so are excluded from this application.

2.2 Sediment & Erosion Control

Due to the contour of the existing landform it is anticipated that sediment and erosion controls will be integrated with the neighbouring Halls Farm Stage 2A Development. A control plan for this site has been approved through EPA, refer to drawing S3278-03-230 in Appendix A for information. All controls will be constructed in accordance with Auckland Council Guideline Document 2016/005: Erosion and Sediment Control Guide for Land Disturbing Activities in the Auckland Region.

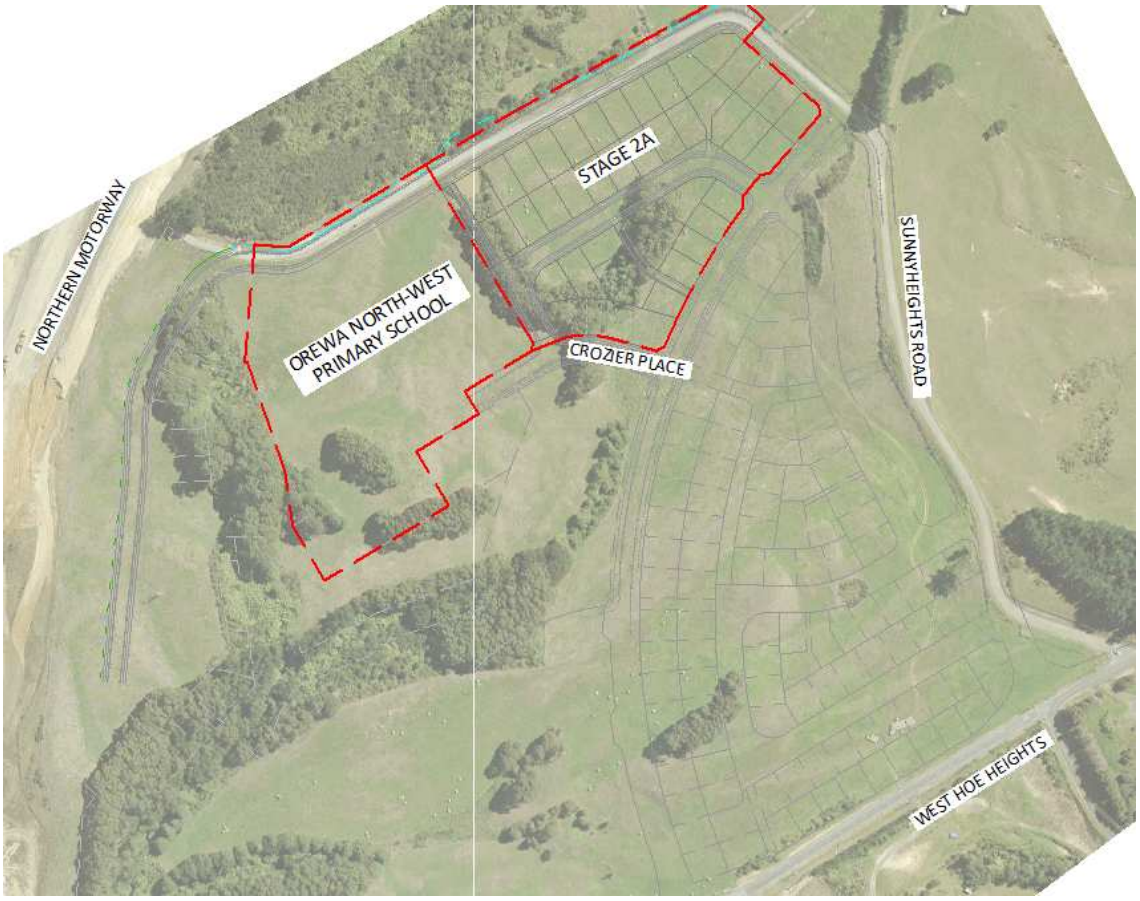
3 Roading and Access

3.1 Road Typologies

Access to the site is via Crozier Place to the south and Sunnyheights Road to the north. The section of Sunnyheights Road over the frontage extents of the subject site will be upgraded as part of the works, as construction of the carriageway east of the site boundary will be completed as part of the approved Halls Farm Stage 2A works. The public road typology proposed for Sunnyheights Road extension has been detailed below:

- 20m legal width road reserve. The carriageway formation will be 8.5m wide, with a 3m wide shared path to be constructed on the southern side. No footpath is proposed on the northern/eastern side of the road, it is anticipated this will be formed by others as part of the future neighbouring developments.

Refer to location diagram below:



3.2 Carparking

With the 8.5m formed carriageway widths on street parking will be provided on all road edges.

3.3 Pavement Design

The proposed roads comprise of the following pavement design, note these pavement structures are a continuation of the design approved for the neighbouring stage of the development. Refer to drawing S3278-02-340 in Appendix A for information.

- Lime/cement stabilised subgrade with 2% lime/cement to min. 250mm deep to provide a minimum CBR strength of 7% overlying natural CBR of 3% (Note: application rate to be confirmed via reactivity testing prior to road construction)
- 250mm compacted depth GAP65 (Manarc or similar approved)
- 180mm compacted depth TNZ M/4 basecourse
- 40mm depth DG10 asphaltic concrete on first coat chipseal (Grade 4 chip)
- The target Benkelman beam deflections on the finished pavement surface is 1.0mm in accordance with ATCOP (Collector Road).

3.4 Street Lighting

The street light configuration along Sunnyheights Road will be a continuation of the design prepared by LDP Ltd which was submitted as part of the neighbouring Stage 2A EPA application. Detailed design for the lighting configuration will be submitted for Engineering Plan Approval in due course.

4 Stormwater Drainage

4.1 Proposed Network

It is expected that all internal stormwater drainage will be private designed in accordance with the NZ Building Code.

An existing 2050mm dia stormwater manhole has been installed in the south-eastern corner of the site has part of the Halls Farm Development, which will allow for future connection and discharge of stormwater from the school site. The existing infrastructure has been sized to accommodate the runoff from the subject site, refer to the stormwater catchment plan on drawing S3278-2A 470 in Appendix A for an illustration. Details of the hydraulic design report have also been included in Appendix B.

Runoff from the site will drain to ‘Wetland A’ (as completed as part of the Halls Farm Stage 1 works) via an existing wingwall structure which were constructed as part of Halls Farm Stage 1. Allowance has also been made for the upstream catchment (north of Sunnyheights Road) using a runoff coefficient of 0.75, the catchment area was calculated based on GIS contours.

Note: Catchments associated with the subject site under the Stage 2A application allowed for residential development. Calculations have been carried out to determine the overall runoff co-efficient for the site, producing a C factor of 0.725.

4.2 Stormwater Management and Overland Flow Paths

Wetland A has been constructed to provide water quality treatment of the road runoff as well as extended detention for the road runoff and developed lots. Overland flowpaths for rainfall events in excess of the 10 year ARI design event i.e. 100 year (1%) ARI events have been accommodated within the design and will be conveyed to Wetland A via the ROW and road alignments.

Calculations for the wetland were provided previously as part of the Stage 1 EPA application. Construction of the wetland is now complete, with final sign off being sought from Healthy Waters (Auckland Council) at the time of reporting.

5 Wastewater Drainage

5.1 Proposed Network

It is proposed to extend the public gravity wastewater system to the site boundary as part of the neighbouring Halls Farm Stage 2A works. The approved EPA plans for this network have been included in Appendix A, refer to drawing S3278-2A 501 for information.

5.2 Flow Estimation

Estimation of peak wastewater flows from the subdivision and potential wider catchment at the northern end of Sunnyheights Road have been carried out based on the following assumptions:

1. Orewa North-West Primary School (700 Students)
2. ODL's development site (98 lots)
3. Potential future subdivision at No. 52 Sunnyheights Road (50 Lots)
4. Potential future subdivision at No. 60 Sunnyheights Road (50 Lots)

The total development allowance was therefore 198 lots with a primary school of 700 students. Based on the receiving catchment, the estimated PDWF and PWWF is 4.04 and 11.40 L/s respectively. Refer attached calculations in Appendix C for further information.

6 Water Supply

6.1 Proposed Network

It is proposed to extend the public water supply network to the site boundary as part of the neighbouring Halls Farm Stage 2A works. The approved EPA plans for this network have been included in Appendix A, refer to drawing S3278-2A-600 for an illustration.

As detailed on the supporting EPA plan set, 100mm (internal diameter) pipes will be provided along both Sunny Heights Road and Crozier Place to enable supply for the subject site. The internal reticulation within the school site will be designed separately and included in a subsequent application.

6.2 Flow Estimation

Based on the proposed school roll (700 students), the estimated peak demand for the gravity network is 0.41 L/s. Refer attached calculations in Appendix D for further information.

An estimate of the flow from the future development has also been undertaken which allows for Stage 4 of Halls Farm to the west. The additional peak flow calculated for this area is 0.66 L/s, with a total peak demand flow of 1.06 L/s.

7 Utility Services

New underground power and telecommunications infrastructure will be extended as part of the neighbouring Stage 2A works to reticulate the site. Service connection points will be installed at the boundary of the school site at the time of those works.

STABILISED CONSTRUCTION ENTRANCE SPECIFICATIONS:

APPLICATION

USE A STABILISED CONSTRUCTION ENTRANCE AT ALL POINTS OF CONSTRUCTION SITE INGRESS AND EGRESS WITH A CONSTRUCTION PLAN LIMITING TRAFFIC TO THESE ENTRANCES ONLY. THEY ARE PARTICULARLY USEFUL ON SMALL CONSTRUCTION SITES BUT CAN BE UTILISED FOR ALL PROJECTS.

DESIGN:

1. CLEAR THE ENTRANCE AND EXIT AREA OF ALL VEGETATION, ROOTS AND OTHER UNSUITABLE MATERIAL AND PROPERLY GRADE IT.
2. LAY WOVEN GEOTEXTILE; PIN DOWN EDGES AND OVERLAP JOINTS.
3. PROVIDE DRAINAGE TO CARRY RUNOFF FROM THE STABILISED CONSTRUCTION ENTRANCE TO A SEDIMENT CONTROL MEASURE.
4. PLACE AGGREGATE TO THE SPECIFICATIONS BELOW AND SMOOTH IT.

STABILISED CONSTRUCTION ENTRANCE AGGREGATE SPECIFICATIONS:

AGGREGATE SIZE	5–150mm WASHED AGGREGATE
THICKNESS	150mm MINIMUM OR 1.5 X AGGREGATE SIZE
LENGTH	10m MINIMUM
WIDTH	4m MINIMUM

MAINTENANCE

1. MAINTAIN THE STABILISED CONSTRUCTION ENTRANCE IN A CONDITION TO PREVENT SEDIMENT FROM LEAVING THE CONSTRUCTION SITE. AFTER EACH RAINFALL INSPECT ANY STRUCTURE USED TO TRAP SEDIMENT FROM THE STABILISED CONSTRUCTION ENTRANCE AND CLEAN OUT AS NECESSARY.
2. WHEN WHEEL WASHING IS ALSO REQUIRED, ENSURE THIS IS DONE ON AN AREA STABILISED WITH AGGREGATE WHICH DRAINS TO AN APPROVED SEDIMENT RETENTION FACILITY.

NOTES:

1. ALL EROSION AND SEDIMENT CONTROL MEASURES MUST BE OPERATIONAL PRIOR TO ANY OTHER WORKS COMMENCING ON SITE. THE CONTRACTOR SHALL ARRANGE FOR AND ATTEND A PRELIMINARY SEDIMENT CONTROL MEETING ON–SITE WITH THE ENGINEER AND THE EW SOIL CONSERVATOR.
2. A COPY OF THE EROSION MANAGEMENT PLAN SHALL BE AVAILABLE ON THE SITE DURING WORK HOURS AND ALL PERSONNEL INVOLVED IN EARTHWORK ACTIVITIES ON THE SITE (INCLUSIVE OF SUB–CONTRACTORS) SHALL BE FAMILIAR WITH THE CONSENT AND PLAN REQUIREMENTS AS THEY RELATE TO EROSION AND SEDIMENT CONTROL.
3. THAT ALL "CLEANWATER" RUNOFF FROM STABILISED SURFACES INCLUDING CATCHMENT AREAS ABOVE THE SITE SHALL BE DIVERTED AWAY FROM EARTHWORK AREAS VIA STABILISED SYSTEM, SO AS TO PREVENT SURFACE EROSION.
4. ALL EROSION AND SEDIMENT CONTROL SHALL COMPLY WITH THE "EROSION AND SEDIMENT CONTROL GUIDELINES FOR LAND DISTURBING ACTIVITIES" ARC TECHNICAL PUBLICATION NO. 90 UPDATED MARCH 1999 AND ANY AMENDMENTS TO THIS DOCUMENT.
5. THE SITES FOR SEDIMENT RETENTION PONDS SHALL BE SELECTED ONSITE BY THE EW OFFICER, THE ENGINEER AND THE CONTRACTOR WITH DUE CONSIDERATION TO THE NATIVE VEGETATION, TOPOGRAPHY AND ANY OTHER SPECIFIC REQUIREMENTS. THE MAIN SILT CONTROL MEASURES FOR THIS SITE ARE:

(I) DIVERSION OF "CLEAN WATER" FROM THE ABOVE CATCHMENTS AROUND THE EARTHWORKS AREA BY MEANS OF DIVERSION DRAINS, AND/OR OTHER APPROVED METHOD.

(II) CONSTRUCTION OF CUT OFF DRAINS, CONTOUR DRAINS AND EARTH BUNDS TO INTERCEPT SILT LADEN WATERS AND DIRECT INTO RETENTION PONDS AND OTHER SEDIMENT CONTROL FACILITIES. CONTOUR DRAINS ARE TO BE SPREAD AT 100m INTERVALS WITH THE SLOPE LIMITED TO 2%

(III) CONSTRUCTION OF SEDIMENT RETENTION POND TO COLLECT SILT FROM (II) ABOVE WITH THE ADDITIONAL TEMPORARY CONSTRUCTION OF HAY BALE BARRIER/SILT FENCES AS REQUIRED.

(IV) THAT THE SITE BE STABILISED AGAINST EROSION AS SOON AS PRACTICABLE AND IN A PROGRESSIVE MANNER AS EARTHWORKS ARE FINISHED OVER VARIOUS AREAS OF THE SITE. REVEGETATION IS TO BE COMPLETED BY 30 APRIL IN THE YEAR OF EARTHWORKS CONSTRUCTION, UNLESS A LATER DATE IS APPROVED IN WRITING BY THE AUCKLAND COUNCIL.

(V) MAINTENANCE OF ALL SEDIMENT CONTROL FACILITIES AS REQUIRED.

(VI) THE CONTRACTOR SHALL SUBMIT ASBUILTS SHOWING ALL THE APPROPRIATE SEDIMENT CONTROL MEASURES ARE INSTALLED AND IS TO BE SUBMITTED TO THE ARC WITHIN 7 DAYS FOLLOWING THE CONSTRUCTION OF THE CONTROLS.

6. FURTHER SEDIMENT CONTROL WORKS MAY BE REQUIRED BY THE ENGINEER AS THE PROJECT ADVANCES. THESE WILL BE INSTALLED AS AND WHERE DIRECTED BY THE ENGINEER. THE CONTRACTOR IS SOLELY RESPONSIBLE FOR ENSURING THAT THE SITE HAS EFFECTIVE SILT DETENTION FACILITIES OPERATING AT ALL TIMES.

1. MAXIMUM LATERAL DIAMETER SHALL BE LESS THAN HALF THE DIAMETER OF THE MAIN PIPE, FOR SADDLE OR JUNCTION CONNECTIONS.
2. FOR A CONNECTION TO A PE MAIN A JUNCTION SHALL BE CUT IN WITH 'ELECTROFUSION' COUPLERS. ALTERNATIVELY A SADDLE MAY BE ELECTROFUSED INTO PIPE. SPECIFIC APPROVAL FROM AUCKLAND COUNCIL IS REQUIRED TO SADDLE INTO A PE MAIN.
3. IF THE LATERAL DIAMETER IS GREATER THAN HALF THE DIAMETER OF THE MAIN PIPE, THE JUNCTION SHALL ALWAYS BE THROUGH A CHAMBER.
4. FOR SADDLE INSERTS THE HOLE IN THE EXISTING PIPE SHALL BE DRILLED NO PROTRUSION WILL BE ALLOWED INSIDE THE BORE.
5. WHERE THE PRIVATE CONNECTION PIPE CANNOT BE CONSTRUCTED DUE TO PHASING OF THE DEVELOPMENT, THE POINT OF CONNECTION SHALL BE MARKED BY A BLUE 25mm DIA uPVC TUBE. SEE SECTION 4.3.11.
6. WHEN THE PIPELINE BEING CONNECTED TO THE PUBLIC MAIN IS LARGER THAN 300mm DIAMETER, OR WHERE THE PIPE SERVES MORE THAN THREE LOTS, THE CONNECTION SHALL BE MADE AT A MANHOLE.
7. A RODDING POINT SHALL BE PROVIDED ON THE PRIVATE LATERAL TO ALLOW CCTV ACCESS.
8. PUBLIC/PRIVATE BOUNDARY SHALL BE EITHER 1.0m INSIDE PRIVATE BOUNDARY OR AT THE FIRST PIPE JOINT, WHICHEVER IS THE LEAST.
