Exceptional thinking together
NOTES:
1. Sketch not drawn to scale.
2. Groundwater levels and geological profiles have been inferred.
3. Recharge to groundwater is estimated to be 10% of rainfall (subject to further review of rainfall and groundwater levels).
4. Groundwater levels and geological profiles have been inferred.
5. Annual volumetric rainfall is approximately 1.6Mm³ for the valley 1 catchment.
6. Recharge of groundwater in the upper Pakiri formation is estimated to be 10% of rainfall.
7. Perched groundwater within residual soil at the interface with highly/moderately weathered rock.
