Re: Cycleway Plans and Impact Request

Thank you for your email of 08 January 2026, requesting information about the Tāmaki Path Stage 2 Project. The specific details of your request and our response are below.

I am a resident of Wai O Taiki Bay and have been informed that there is a new cycle way being constructed. I understand the plan was consented about 2 years ago and construction is due to start in the coming weeks. May you please disclose the full plan including but not limited to; planning for the impact on the environment, impact on native species to the bush/stream, Maori artefacts and costings estimates.

Our Parks and Community Facilities department has provided the following documents in response to your request for the full plan, including environmental impacts, effects on native species, Māori artefacts, and cost estimates.

- **Document A** - Assessment of Environmental Effects Assessment (AEE) – application for resource consent for the project
- **Document B** - Additional Section 92 information request response to Council regulatory team for the resource consent application
- **Document C** - Notification letter - Mana Whenua
- **Document D** - Notification letter - Marine and Coastal Area (Takutai Moana) Act 2011 (MACA) Act
- **Document E** - Approved Resource Consent
- **Document F** - Approved consenting plans
- **Document G** - Engineers estimate that was also reviewed by Quantity Surveyor.

Private email addresses have been redacted in some attachments in accordance with section 7(2)(a) of the Local Government Official Information and Meetings Act 1987 (LGOIMA), to protect the privacy of natural persons.

We are also providing the following additional information:

The arborist's report referenced in the Resource Consent, including details relating to tree removals.

You can find the arboricultural assessment in **Document H**. This report measures how the bridge, boardwalk, and track construction affects the area. It includes a summary of our tree protection methods and the specific details you asked for regarding tree locations and removals.

The Geotechnical report for the steep bank along the 98–104 Taniwha Street boundary.

The geotechnical report for the project, including the bank along the 98–104 Taniwha Street boundary, is attached as **Document I**.

Structural engineering reports, including the boardwalk design along the boundary, and stormwater and runoff calculations for the 2–3m wide concrete path, including any erosion assessments.

The following documents cover the structural and environmental details of the project:

- **Document J:** The latest engineering drawings (dated December 2025)
- **Document K:** The construction methodology and the erosion and sediment control plan
- **Document L:** Structural calculations for the boardwalk and bridge.

A note on stormwater and runoff - Because the path is long and narrow and follows the land's natural shape, the project will not change the area's natural hydrology. The path takes up a very small part of the site, so stormwater will naturally disperse across the land rather than being discharged from a single point.

Due to the size of the files, you can access the information using the OneDrive link below. You'll need to enter your email address to view the documents. Please note the link will expire after 20 working days, so we recommend saving the files to your device.

Sometimes the verification code email may go to your junk folder—please check there if you don't see it in your inbox.
