

Outcome

Belonging and Participation

Measure 4

Relative deprivation across Auckland

Population-Weighted Average Deprivation Index Score (2013 Census)

Data

Socio-economic Deprivation Index (NZDep).

Source

Department of Public Health, University of Otago, Wellington.

Frequency

The Deprivation Index is produced after each census, generally every 5 years.

Availability

Deprivation Index data can be downloaded from the “New Zealand Indices of Deprivation” section of the project website, where more technical details about the index can also be found.

Note

The Deprivation Index assigns a value to Census Area Units (CAUs) across New Zealand as a way to indicate relative socioeconomic deprivation. The index is not a measure of absolute deprivation (the lower the number the lower the relative deprivation).

The index is calculated via a number of census variables from the following themes: access to communications; income, employment, qualifications, home ownership, single-parent family status, living space and access to private transport.

Relevance

The Deprivation Index allows investigation of spatial patterns of relative socioeconomic deprivation, which can be used in planning both council and community projects.

Analysis

Analysis will be provided as part of July 2019 annual scorecard.
