Transport and Access

Measure 5

Deaths and injuries from transport network

Number of serious and fatal injuries

Data

Serious and fatal traffic deaths and injuries.

Source

New Zealand Transport Agency.

Frequency

Weekly.

Availability

New Zealand Transport Agency website.

Note

Road crash 'fatal and serious injuries' (FSI) is an annual measure of the number of individual deaths and serious injuries recorded by NZ Police Traffic Crash Reports (TCRs) on all local roads, state highways and motorways within the Auckland Council boundary during a calendar year.

Reporting delays may cause numbers to change slightly between reporting cycles.

Relevance

This is a key indicator for understanding annual changes in the severity of road trauma across Auckland. The measure reflects the recent international and national shift to a Safe Road System increasingly free of death and serious injury. This approach acknowledges that while minor injury or non-injury crashes may still occur, road system designers have a responsibility to creating and operating a transport system where people are protected from death or serious injury.

Baseline (2018)

As at December 2018 there were:

- 595 serious injuries.
- 54 fatalities.

Analysis

Between 2010 to 2014 fatalities were declining whilst serious injuries remained consistent between 400 to 450 per year. While there was a reduction in 2018 combined serious injuries and fatalities have shown a rising trend from 2012.

(^) Trend

From 2010 to 2018 increasing negative trend.
