

# Memo

Date 4/07/2022

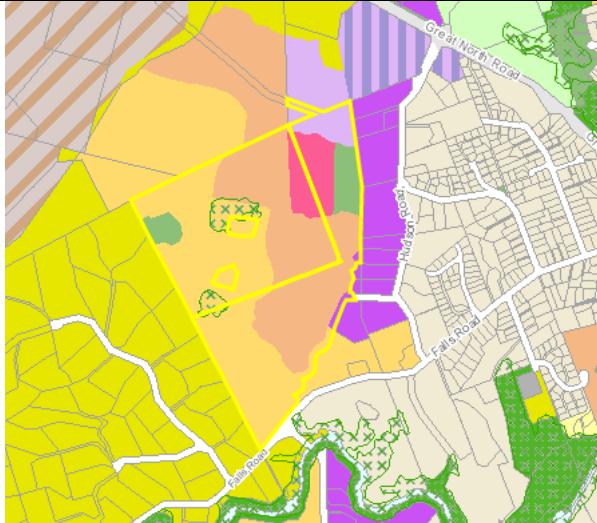

To: Warren MacLennan, Manager  
From: Ben Willis - Planner

Subject: **Plan Modification: Clause 20A modification to Auckland Unitary Plan**

Corrections are required to the Auckland Unitary Plan (Operative in Part) 2016 (the AUP).

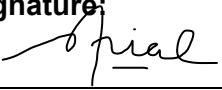

I seek your approval of this plan modification pursuant to clause 20A, first schedule, Resource Management Act 1991.

You have delegated authority, as a tier four manager, to make a decision to correct an error to an operative plan under clause 20A. Schedule 2A of the Auckland Council Combined Chief Executives Delegation Register<sup>1</sup> authorises all powers, functions, and duties under RMA's first schedule (except clause 17 which cannot be delegated) to tier four positions.

<b>Rule or Section of Unitary Plan</b>	Schedule 3 Significant Ecological Areas - Terrestrial Schedule
<b>Subject Site (if applicable)</b>	
<b>Legal Description (if applicable)</b>	LOT 5 DP 522636 LOT 3 DP 537212
<b>Nature of change</b>	<p>A Clause 20A modification is required to correct the lack of identifier/schedule number for two territorial SEAs which should be added as part of PC25 into the AUP.</p> <p><b>Discussion</b></p> <p>The SEAs extents have been added to the maps as part of the PC25 process but the identifier numbers have not been added to Schedule 3 or the GIS viewer attributes table.</p> <p>The two new SEAs were approved as part of the plan change as stated in the Hearing Commissioners Decision Document.</p>

	<p>The Ecological Value Factors were proposed by the applicants ecologist through Appendix 13 to the s32 report. It refers to Four potential areas which were assessed (page 8) and concludes that Area 1 and Area 3 should be SEAs. Area 1 (Southern of the two SEAs) meeting Criteria 2 for Threat status and rarity (page 100), Area 3 (Northern of the two SEAs) is not so explicitly defined but they use the words forest-wetland environmental gradient and Ecotone when describing the area (page 10-11) this aligns with Criteria 3 for Diversity.</p> <p>This assessment was reviewed and agreed to by Councils Ecologists and the reporting planner as noted in the S42A report.</p>						
<b>Effect of change</b>	This is to correct a minor error and will be a neutral change as the existence of the SEAs is already recorded on the planning maps. All information being proposed as a change will not affect the extent of the SEAs which have already been agreed to as part of PC25.						
<b>Changes required to be made (text/in-text diagrams)</b>	<p>Amend <i>Table: Significant Ecological Areas – Terrestrial Schedule (SEA_T) [dp]</i> of Schedule 3 in the Operative in Part version. The two SEAs require ID numbers and additions of the <i>Factors met</i>.</p> <table border="1"> <thead> <tr> <th>ID</th><th>Factors met</th></tr> </thead> <tbody> <tr> <td>SEA_T_9103</td><td>2</td></tr> <tr> <td>SEA_T_9104</td><td>3</td></tr> </tbody> </table> <p>Refer to attachment 1</p>	ID	Factors met	SEA_T_9103	2	SEA_T_9104	3
ID	Factors met						
SEA_T_9103	2						
SEA_T_9104	3						
<b>Changes required to be made (maps)</b>	<p>Amend the attributes table in the GIS Viewer to include the schedule number for the SEAs.</p> <p>Map showing the SEAs and labelling which is assigned to each of the ID numbers</p> <p>Refer to attachment 3</p>

## Schedule 3 Significant Ecological Areas – Terrestrial Schedule

### Factors for assessing ecological value [rps]

An area shall be considered to have significant ecological value if it meets one or more the sub-factors 1 to 5 below. These factors are also referred to in [B7.2.2\(1\)](#).

These factors have been used to determine the areas included in Schedule 3 Significant Ecological Areas – Terrestrial Schedule, and will be used to assess proposed future additions to the schedule.

#### Factors:

##### (1) REPRESENTATIVENESS

Sub-factor:

- (a) It is an example of an indigenous ecosystem (including both mature and successional stages), that contributes to the inclusion of at least 10% of the natural extent<sup>1</sup> of each of Auckland's original ecosystem types<sup>2</sup> in each ecological district of Auckland (starting with the largest, most natural and intact, most geographically spread) and reflecting the environmental gradients of the region, and is characteristic or typical of the natural ecosystem diversity of the ecological district and/or Auckland.

##### (2) THREAT STATUS AND RARITY

Sub-factors:

- (a) It is an indigenous habitat, community or ecosystem that occurs naturally in Auckland and has been assessed (using the IUCN threat classification system) to be threatened, based on evidence and expert advice (including Holdaway et al. Status assessment of NZ naturally uncommon ecosystems<sup>3</sup>).
- (b) It is a habitat that supports occurrences of a plant, animal or fungi that has been assessed by the Department of Conservation and determined to have a national conservation status of threatened or at risk; or
  - (i) it is assessed as having a regional threatened conservation status including Regionally Critical, Endangered and Vulnerable and Serious and Gradual Decline.
- (c) It is indigenous vegetation that occurs in Land Environments New Zealand Category IV where less than 20% remains.

---

<sup>1</sup> "Natural extent" is intended to mean a combination of our understanding of the historic pre-human diversity, distribution and extent of ecosystems in Auckland and what we would expect this to be given past and current environmental drivers.

<sup>2</sup> The Department of Conservation's ecosystem classification system described over 135 ecosystems in New Zealand (Singers and Rogers in press). Of these 35 ecosystems are known to have occurred in Auckland and these are what is meant by original ecosystems. They include the more recent indigenous dominated shrub and scrublands that have evolved as a result of human modification of the landscape.

<sup>3</sup> Status Assessment of New Zealand's Naturally Uncommon Ecosystems, ROBERT J. HOLDAWAY, SUSAN K. WISER and PETER A. WILLIAMS. Conservation Biology. [Volume 26, Issue 4](#), pages 619–629, August 2012

- (d) It is any indigenous vegetation or habitat of indigenous fauna that occurs within an indigenous wetland or dune ecosystem.
- (e) It is a habitat that supports an occurrence of a plant, animal or fungi that is locally rare; or
  - (i) it has been assessed by the Department of Conservation and determined to have a national conservation status of Naturally Uncommon, Range Restricted or Relict.

**(3) DIVERSITY**

Sub-factors:

- (a) It is any indigenous vegetation that extends across at least one environmental gradient resulting in a sequence that supports more than one indigenous habitat, community or ecosystem type e.g., an indigenous estuary to an indigenous freshwater wetland.
- (b) It supports the expected indigenous ecosystem diversity for the habitat(s).
- (c) It is an indigenous habitat type that supports a typical species richness or species assemblage for its type.

**(4) STEPPING-STONES, MIGRATION PATHWAYS AND BUFFERS**

Sub-factors:

- (a) It is an example of an indigenous ecosystem, or habitat of indigenous fauna that is used by any native species permanently or intermittently for an essential part of their life cycle (e.g. known to facilitate the movement of indigenous species across the landscape, haul-out site for marine mammals) and therefore makes an important contribution to the resilience and ecological integrity of surrounding areas.
- (b) It is an example of an ecosystem, indigenous vegetation or habitat of indigenous fauna, that is immediately adjacent to, and provides protection for, indigenous biodiversity in an existing protected natural area (established for the purposes of biodiversity protection); or
  - (i) it is an area identified as significant under the ‘threat status and rarity’ or ‘uniqueness’ factor. This includes areas of vegetation (that may be native or exotic) that buffer a known significant site. It does not include buffers to the buffers.
- (c) It is part of a network of sites that cumulatively provide important habitat for indigenous fauna or when aggregated make an important contribution to the provision of a particular ecosystem in the landscape.
- (d) It is a site which makes an important contribution to the resilience and ecological integrity of surrounding areas.

**(5) UNIQUENESS OR DISTINCTIVENESS**

Sub-factors:

- (a) It is habitat for a plant, animal or fungi that is endemic to the Auckland region (i.e. not found anywhere else).
- (b) It is an indigenous ecosystem that is endemic to the Auckland region or supports ecological assemblages, structural forms or unusual combinations of species that are endemic to the Auckland region.
- (c) It is an indigenous ecosystem or a habitat that supports occurrences of a plant, animal or fungi that are near-endemic (i.e., where the only other occurrence(s) is within 100km of the council boundary).
- (d) It is a habitat that supports occurrences of a plant, animal or fungi that is the type locality for that taxon.
- (e) It is important as an intact sequence or outstanding condition in the region.
- (f) It is a habitat that supports occurrences of a plant, animal or fungi that is the largest specimen or largest population of the indigenous species in Auckland or New Zealand.
- (g) It is a habitat that supports occurrences of a plant, animal or fungi that are at (or near) their national distributional limit.
