These values and uses create competing demands between sustaining ecosystem health and the need to abstract or use water for other activities. The competing demands for water require appropriate management. For catchments, both aquifers and streams, that are over-allocated or at risk of being over-allocated, priority setting for water takes and the use of water efficiency measures are required.</u>

The policy supports existing towns and serviced villages by directing growth to them and, in the case of existing towns and serviced villages, allowing for the efficient use of existing infrastructure and future infrastructure funding. Objective 4 and policy 3 seek to avoid new towns or villages outside the RUB and to prevent urban expansion into rural areas, except where provided by a Precinct Plan, or by following the process in Policy 3. The criteria in policy 1 relating to the expansion of towns and serviced villages emphasises the priority for growing them over establishing new towns and serviced villages. It is expected that any new towns or villages established under Policy 3 will need to provide the necessary infrastructure and services to be self-sufficient.'
