

Attachment 90

Amend I.6.4.1 (3) to read as below:

3. Discharge of ~~untreated~~ wastewater ~~overflows~~ from a wastewater network servicing new development areas, and from new wastewater networks within existing urban areas that does not comply with the permitted activity controls

~~a. the management of the wastewater discharge and the mitigation of any adverse effects associated with the permitted activity controls that are unable to be met~~

~~b. the mitigation of any adverse effects arising from wastewater overflows, including those on potable water supplies and public health~~

~~c. associated monitoring and reporting~~

~~d. the duration of the consent and the timing and nature of reviews of consent conditions~~

~~e. implementation of the overflow reduction programme~~

~~f. implementation of the wastewater network operations plan and the operational and maintenance programme.~~

a. For the discharge of wastewater from a wastewater network servicing new development areas, and from new wastewater networks within existing urban areas:

i. the extent to which the design of the new wastewater network is unable to comply with the permitted activity controls.

ii. the mitigation of potential adverse effects arising from wastewater overflows, including those on potable water supplies and public health

iii. associated monitoring and reporting

iv. the duration of the consent and the timing and nature of reviews of consent conditions.

b. For the discharge of wastewater from a separated wastewater network servicing existing urban areas, to:

i. implementation of the overflow reduction programme

ii. the mitigation of any adverse effects associated with the discharges, including effects on potable water supplies and public health

iii. implementation of the wastewater network operations plan and the operations and maintenance programme

iv. associated monitoring and reporting

v. the duration of the consent and the timing and nature of reviews of consent conditions.
