

Attachment 93

Relief sought for I.6.5.2(15)

15. Discharge of wastewater from a combined sewer wastewater network:

- ~~a. the extent to which the proposed best practicable option:~~
- ~~i. prevents or minimises adverse effects particularly on public health, safety and amenity, potable water supplies, Mana Whenua values, freshwater systems and coastal waters~~
 - ~~ii. provides for wastewater discharges generated as a result of potential urban growth, urban redevelopment, and land use intensification within the catchment, taking into account the growth and intensification provisions of the Unitary Plan~~
 - ~~iii. progressively reduces overflows and associated adverse effects, and the priorities and timeframes for doing so, having particular regard to:~~
 - ~~• areas of contact recreation and public use~~
 - ~~• receiving environments that are sensitive to the adverse effects of wastewater overflows~~
 - ~~• areas with high Mana Whenua values~~
 - ~~iv. takes account of consultation with key stakeholders, including Mana Whenua and the community~~
 - ~~v. considers potential impacts on stormwater management.~~
- ~~b. whether the operations and maintenance plans and programmes provided will ensure the effective operation of the combined sewer network and minimise dry weather discharges.~~
- ~~c. whether the response procedures and processes provided will mitigate the adverse effects of overflows.~~

a. The extent to which the proposed best practicable option:

- i. prevents or minimises adverse effects of wastewater overflows on public health, potable water supplies, freshwater and coastal waters ;
- ii. addresses wastewater discharges generated as a result of potential urban growth, urban redevelopment, and land use intensification, taking into account the growth and intensification provisions of the Unitary Plan;
- iii. progressively reduces wastewater overflows and associated adverse effects, and the priorities and timeframes for doing so, with regard to:
 - areas of contact recreation and public use
 - receiving environments that are sensitive to the adverse effects of wastewater overflows
 - areas with high Mana Whenua values
- iv. takes account of consultation with key stakeholders, including Mana Whenua and the community
- v. considers potential impacts on stormwater management

b. The extent to which the operations and maintenance plan and programmes address the effective operation of the combined sewer network and minimisation of dry weather overflows.

c. The effectiveness of the response procedures and processes provided to mitigate the adverse effects of overflows.
